### **Understanding Life Sciences Grade 12 Workbook: Key Questions and Answers**

The Grade 12 Life Sciences workbook is an essential resource for students seeking a comprehensive understanding of the subject. It covers a wide range of topics, from the structure and function of living organisms to genetics, evolution, and ecology.

**1. What is the basic structure and function of a eukaryotic cell?** A eukaryotic cell consists of a nucleus, mitochondria, endoplasmic reticulum, Golgi apparatus, and various other organelles. The nucleus contains the cell's genetic material, while the mitochondria generate energy. The endoplasmic reticulum and Golgi apparatus are involved in protein and lipid synthesis, respectively.

**2. Explain Mendel's laws of inheritance.** Mendel's laws of inheritance describe the patterns of inheritance observed in pea plants. The law of segregation states that each parent contributes one allele to their offspring for each gene. The law of independent assortment states that the inheritance of alleles for different genes occurs independently of each other.

**3. Describe the process of photosynthesis.** Photosynthesis is a process by which plants use energy from the sun to convert carbon dioxide and water into glucose and oxygen. The process occurs in the chloroplasts of plant cells and involves two stages: the light-dependent and light-independent reactions.

**4. Explain the theory of evolution by natural selection.** The theory of evolution by natural selection proposes that organisms with traits that enhance their survival and reproduction are more likely to pass those traits on to their offspring. Over time, this process leads to the accumulation of advantageous traits in a population.

**5. Describe the role of biodiversity in maintaining ecosystem balance.** Biodiversity refers to the variety of different species in an ecosystem.
