a cultural construct.

Q: What is the "God brain"?

A: Newberg uses the term "God brain" to refer to specific neural pathways that are activated during religious experiences. Studies have shown increased activity in certain brain regions, such as the prefrontal cortex, temporal lobes, and parietal lobes, during prayer, meditation, and other spiritual practices.

Q: How does the brain differentiate between spiritual and secular experiences?

A: The brain doesn't have distinct categories for spiritual and secular experiences. However, research suggests that religious beliefs and practices may trigger specific neural pathways that are distinct from those activated by other forms of cognitive activity.

Q: Can brain science disprove the existence of God?
