### World's Fastest Land Animal: A Student's Guide

**Question: What is the world's fastest land animal? Answer:** The cheetah (*Acinonyx jubatus*) is the world's fastest land animal, capable of reaching speeds of up to 120 kilometers per hour (75 miles per hour) in short bursts.

**Question: How does the cheetah achieve such high speeds? Answer:** The cheetah's unique adaptations contribute to its extraordinary speed. These adaptations include:

- Long, slender body for streamlining
- Long, muscular legs for powerful strides
- Flexible spine for extra extension
- Non-retractable claws that act like running spikes
- Lightweight body with minimal muscle mass

**Question: What is the purpose of the cheetah's speed? Answer:** The cheetah primarily uses its speed to hunt prey. Cheetahs are specialized predators of gazelles, which they chase down in open grasslands. Their short bursts of speed allow them to quickly catch their prey before it can escape.

**Question: What is the average lifespan of a cheetah? Answer:** Cheetahs have a relatively short lifespan in the wild, averaging 8-12 years. This is due to various factors such as habitat loss, human-wildlife conflict, and vulnerability to diseases and injuries.
