Spring Framework 5: Creando una Web App de Cero a Experto

El Spring Framework es un potente marco de trabajo para el desarrollo de aplicaciones Java empresariales. Con su última versión, Spring 5, puedes crear aplicaciones web de forma rápida y eficiente. Este artículo te guiará a través de los pasos esenciales para construir una aplicación web completa desde cero utilizando Spring Framework 5.

1. ¿Cómo configurar un proyecto Spring Boot?

Spring Boot simplifica la configuración del proyecto proporcionando un arranque automático. Crea un proyecto Maven y añade las siguientes dependencias:

```
<dependency>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-starter-web</artifactId>
</dependency>
```

Ejecuta `mvn spring-boot:run` para iniciar la aplicación.

2. ¿Cómo crear controladores RESTful?

Los controladores RESTful gestionan las solicitudes HTTP. Define una clase anotada con `@RestController` y métodos anotados con `@RequestMapping` y `@GetMapping`, `@PostMapping`, etc. para manejar solicitudes específicas. Por ejemplo:

```
import org.springframework.web.bind.annotation.*;
```

```
@RestController
```

```
public class MiControlador {  
    @GetMapping("/hola")  
    public String saludar() {  
        return "Hola, Spring!";  
    }  
}
```

3. ¿Cómo conectar a una base de datos?

Spring Data JPA simplifica el acceso a los datos. Añade la dependencia `spring-boot-starter-data-jpa` y crea una clase de entidad que represente las entidades de tu base de datos. Anota la clase con `@Entity` y define propiedades anotadas con `@Id` y `@Column`.

4. ¿Cómo configurar Thymeleaf o Mustache para plantillas de vista?

Thymeleaf y Mustache son motores de plantillas que permiten crear vistas HTML dinámicas. Añade las dependencias necesarias y configura el procesador de plantillas en el archivo `application.properties`. Por ejemplo, para Thymeleaf:

```
spring.thymeleaf.prefix=classpath:/templates/  
spring.thymeleaf.suffix=.html
```

5. ¿Cómo implementar seguridad con Spring Security?

Spring Security proporciona funcionalidades de seguridad completas. Añade la dependencia `spring-boot-starter-security` y configura el comportamiento de seguridad en el archivo `SecurityConfig.java`. Puedes definir reglas de autorización, autenticación basada en formularios y otros mecanismos de seguridad.
