What does Lacan mean by the unconscious? For Lacan, the unconscious is language, the Other, so unconscious thought can only be conceived with the same linguistic structure as conscious thought.

What is the symbolic order Lacan? SYMBOLIC ORDER (Lacan): The social world of linguistic communication, intersubjective relations, knowledge of ideological conventions, and the acceptance of the law (also called the "big Other"). Once a child enters into language and accepts the rules and dictates of society, it is able to deal with others.

What are the main ideas of Lacan psychoanalysis? Lacan was initially trained as a psychiatrist and later developed his version of psychoanalysis. He was inspired by Sigmund Freud's theories and ideas of structuralism. The core idea in Lacan's psychoanalytic theory is that the unconscious resembles the structures of language.

What is the discourse of the other Lacan? For this reason, Lacan writes that "the unconscious is the discourse of the Other." Even our unconscious desires are, in other words, organized by the linguistic system that Lacan terms the symbolic order or "the big Other." In a sense, then, our desire is never properly our own, but is created through fantasies that ...

What is the symbolic unconscious? The Symbolic (or Symbolic Order of the Borromean knot) is the order in the unconscious that gives rise to subjectivity and bridges intersubjectivity between two subjects; an example is Jacques Lacan's idea

of desire as the desire of the Other, maintained by the Symbolic's subjectification of the Other into speech.

What are the three stages of development of Lacan's theory? The three key concepts of Lacanian psychoanalysis include three separate registers defined by Jacques Lacan of psychosexual development. The three registers are the real, the imaginary, and the symbolic registers.

What is the lacanian symbolic imaginary and real? He identified three constituent contexts for the mind: the Real, the Imaginary, and the Symbolic. Broadly described, the Real is fundamentally a derivative of our senses, the Imaginary is derived from perceptual and fantasied mental processes, and the Symbolic is derived from culture and through language.

What does Lacan argue? Lacan's contention concerning human-being as a parole, put most broadly, is that when the subject learns its mother tongue, everything from its sense of how the world is, to the way it experiences its biological body, are over-determined by its accession to this order of language.

What is the symbol of order and chaos? The yin-yang symbol symbolizes the intertwined nature of order and chaos. This Taoist symbol portrays order (white) and chaos (black) as two intertwined serpents.

What is the point of Lacan? In The Four Fundamental Concepts of Psychoanalysis Lacan argues that "man's desire is the desire of the Other." This entails the following: Desire is the desire of the Other's desire, meaning that desire is the object of another's desire and that desire is also desire for recognition.

What is the critical theory of Lacan? Lacan argued that we are represented by language, by special objects called 'words. ' Lacan's technical term for 'word' is 'signifier' Lacan says that "the signifier represents the subject for another signifier" (Hill 2008: 30). This concept is one of the crucial concepts in Lacanian theory.

What does Lacan say about the self? To Lacan, ego, or self, or "I" identity, is always on some level a FANTASY, an identification with an external image, and not an internal sense of separate whole identity. This is why Lacan calls the phase of demand, and the mirror stage, the realm of the IMAGINARY.

What are the four discourses of Lacan? Lacan (1969–1970) first elaborated his discourse theory in Seminar XVII, where he discerns four discourses 2: the discourse of the master, the discourse of the university, the discourse of the hysteric and the discourse of the analyst.

What is the symbolic definition Lacan? For Jacques Lacan, the symbolic, or the symbolic order, is a universal structure encompassing the entire field of human action and existence. It involves the function of speech and language, and more precisely that of the signifier.

What is the concept of the other Lacan? In Lacan's early work, small 'a' designates another person considered as our counterpart, the mirror of ourself, an equal partner in dialogue; whereas the big 'A' Other (or 'Absolute Other') turns the concept of Otherness into a separate entity - making an 'Otherness in itself' as we might say.

How does Lacan explain the unconscious? Lacan famously said, “The unconscious is structured like a language.” He meant that the unconscious is made up of “chains of repressed signifiers” that relate to one another through their own rules of metaphor and metonymy.

What is conscious and unconscious in psychology? The conscious mind contains all the thoughts, feelings, cognitions, and memories we acknowledge, while the unconscious consists of deeper mental processes not readily available to the conscious mind. Much learning, especially recognition of complex patterns, takes place outside of conscious awareness.

What is symbolic consciousness in psychology? Symbolic consciousness faces the depth of our being and operates images and not concepts. Thus symbolic functions of consciousness provide the integrity of a human world perception and define the possibility of an individual sense of a person become the part of the world they live in.

What are the key concepts of Lacan? In this article the four fundamental concepts of the psychoanalysis by Jacques Lacan are analysed: the unconscious, the desire, the repetition and the transference.

What is the summary of Lacan? The core idea in Lacan's psychoanalytic theory is that the unconscious resembles the structures of language. He is well-known for concepts like *jouissance*, the mirror stage, and his three-part framework of psychological development, including the phases of the real, the imaginary and the symbolic.

What is the Real Lacan theory? The Real: very unlike our conventional conception of objective/collective experience, in Lacanian theory the real becomes that which resists representation, what is pre-mirror, pre-imaginary, pre-symbolic – what cannot be symbolized – what loses its "reality" once it is symbolized (made conscious) through language.

What does the unconscious represent? The unconscious mind can include repressed feelings, hidden memories, habits, thoughts, desires, and reactions. Memories and emotions that are too painful, embarrassing, shameful, or distressing to consciously face are stored in the enormous reservoir that makes up the unconscious mind.

What is the unconscious in psychoanalysis? Freud divided the mind into the conscious mind (or the ego) and the unconscious mind. The latter was then further divided into the id (or instincts and drive) and the superego (or conscience). In this theory, the unconscious refers to the mental processes of which individuals are unaware.

What is the unconscious mind analogy? The tip of the iceberg is our conscious mind, the intermediate part of the iceberg (which is still slightly visible) is the preconscious mind and the huge part underneath the water is our unconscious mind.

What is the unconscious thought theory? Unconscious thought theory (UTT) posits that the unconscious mind is capable of performing tasks outside of one's awareness, and that unconscious thought (UT) is better at solving complex tasks, where many variables are considered, than conscious thought (CT), but is outperformed by conscious thought in tasks with ...

FROM THE CONSCIOUS INTERIOR TO AN EXTERIOR UNCONSCIOUS LACAN DISCOURSE
ANALYS

Edward R. Tufte is an American statistician and author known for his pioneering work on the visual display of quantitative information. His 1983 book, "The Visual Display of Quantitative Information," has become a classic in the field of data visualization.

What is the main thesis of Tufte's book?

Tufte argues that the effective display of quantitative information is crucial for understanding complex data. He emphasizes the importance of simplicity, clarity, and accuracy in visual representations. Tufte believes that graphical displays should avoid clutter, unnecessary elements, and irrelevant detail.

What are some of Tufte's key principles?

Tufte's principles for effective data visualization include:

- Maximize the data-ink ratio: Use the space available for the display efficiently, minimizing the amount of ink used for non-data elements.
- Avoid distortion: Ensure that the visual representation accurately reflects the underlying data without misleading or distorting the information.
- Show comparisons: Facilitate comparisons between different data sets or subsets by using appropriate scales, axes, and color schemes.
- Remove redundancy: Avoid displaying the same information in multiple ways, as this can confuse the reader.

How has Tufte's work impacted data visualization?

Tufte's ideas have had a profound influence on how quantitative information is visually presented in various fields, including science, journalism, and business. His principles are widely used in the design of graphs, charts, maps, and other visual representations of data.

What is Tufte's legacy?

Edward Tufte's contributions to data visualization have earned him widespread recognition as a pioneer in the field. His work has transformed the way we think about and present quantitative information, making it more accessible and easier to understand.
