Solution Manual for Structural Plasticity by Chen: A Comprehensive Guide

Introduction

"Structural Plasticity" by Wai-Fah Chen is a renowned textbook in the field of structural engineering, providing in-depth coverage of plastic behavior and analysis of structures. Its companion solution manual, written by Cheong Tin Tham, is an invaluable resource for students and professionals alike, offering detailed solutions to the challenging problems presented in the textbook.

Question 1: Determine the yield surface for a material with the following stress-strain relationship:

$$\sigma = \sigma_Y + E\epsilon_p$$

Answer:

The yield surface is defined by the equation:

$$f(\sigma) = \sigma - \sigma_Y - E\epsilon_p = 0$$

which is a plane in stress space inclined to the axes by an angle θ given by:

$$\theta = \tan^{-1}(E\epsilon_p/\sigma_Y)$$

Question 2: Analyze a simply supported beam subjected to a concentrated load at mid-span using plastic theory.

Answer:

The plastic collapse load is given by:

$$P = M_p * L / 4$$

where M_p is the plastic moment capacity of the beam and L is the beam span. The collapse mechanism is a simple hinge at mid-span.

Question 3: Use the energy approach to determine the collapse load of a plastic hinge.

Answer:

The collapse load is given by:

$$P = 2 * (E * W_p) / L$$

where E is the elastic modulus, W_p is the plastic work capacity per unit length of the hinge, and L is the length of the hinge.

Question 4: Explain the difference between limit analysis and plastic design.

Answer:

- **Limit analysis** is used to calculate the collapse load of a structure, assuming that the material reaches its yield strength everywhere.
- **Plastic design** is a method of design in which the structure is designed to undergo plastic deformations, but without collapsing, under extreme loads.

Question 5: Describe the concept of shape factor in plastic analysis.

Answer:

The shape factor is a parameter that accounts for the distribution of plastic deformation within a cross-section. It is used to calculate the plastic moment capacity of a beam or column.
