Stepping on the Cracks: Figurative Language in the Playground

Superstitions and folklore often use figurative language to convey deeper meanings or warnings. One such example is the common belief that "stepping on the cracks in the sidewalk will break your mother's back." This seemingly innocuous rhyme holds a wealth of figurative meaning waiting to be explored.

What is Figurative Language?

Figurative language uses words or phrases in a non-literal way to evoke a specific image or idea. It can paint vivid scenes, create emotional connections, or convey hidden meanings. Some common types of figurative language include similes, metaphors, personification, and hyperbole.

Simile vs. Metaphor

In the case of "stepping on the cracks," we have a **simile**. A simile compares two things using the words "like" or "as." Here, the consequence of stepping on the cracks is compared to the act of breaking someone's back. This exaggerated comparison emphasizes the potential severity of the supposed punishment.

Personification

The phrase "break your mother's back" also contains **personification**, where human characteristics are given to a non-human object (the sidewalk). This personification

suggests that the sidewalk has agency and can retaliate for perceived disrespect.

Hyperbole

The severity of the punishment is further exaggerated by the use of **hyperbole**, which is an intentional overstatement. It is highly unlikely that stepping on a crack will actually harm someone's mother. The hyperbole dramatizes the consequences to reinforce the superstition's seriousness.

Meaning of the Superstition

While the specific origin of this superstition is unknown, it is likely rooted in a desire to encourage caution and respect for the environment. Children were taught to avoid stepping on cracks as a way of preventing injury or showing disregard for the sidewalk. Over time, the superstition evolved to incorporate elements of guilt and fear to ensure compliance.
