

# Alpha one outdrive service manual

## [Download Complete File](#)

### **How to tell the difference between MerCruiser Alpha One Gen 1 and Gen 2?**

The Alpha Gen II upper and lower housings are fastened together with two through bolts on either side of the drive along with the front and rear bolts, while the Gen 1 drives use one stud visible on either side. Alpha Ones have two studs under the ventilation plate just above the prop.

### **How much gear lube for MerCruiser alpha one?**

**How do you check gear ratio on Alpha One?** The gear ratio can be found marked on the decal on the upper unit near the drive serial number.

**Is Alpha One outdrive good?** Alpha One Outdrive Most Popular Sterndrive for Power Boats The Alpha One has earned a reputation as a value-priced outdrive propulsion system that delivers reliable speed. These factors combined make it a popular choice for budget conscious boaters that desire performance.

**What year did Alpha 1 Gen 2 come out?** ALPHA ONE (GEN II) 1998 AND UP.

**Are alpha one gen 1 and gen 2 interchangeable?** An Alpha One Gen II will fit straight into the hole for an Alpha One. You might need to just drill the 2 holes at the very top of the cutout, but that's all. As long as your current unit is later than 1982... \$300 for the whole transom assembly and drive sounds too good to be true.

**How often do you change the oil in an outdrive?** Most sterndrive and outboard manufacturers advise you to change the gearcase oil in your lower unit every 100 hours or once a year (whichever comes first). Clean oil is critical for protecting the heavily loaded gears in your lower unit and preventing expensive damage.

**What is the best oil for a mercury lower unit?** 10W-30 Mineral 4-Stroke Marine Engine Oil provides outstanding lubricity for internal engine components to reduce wear, scuffing and scoring for improved long-term reliability, making it a good choice for Mercury and other brand four-stroke outboard engines.

**How often do you change the oil in a MerCruiser?** There's a kit available to change the oil in just about any MerCruiser® four-stroke sterndrive or inboard gasoline engine. Anytime you're servicing your engine, you should follow the maintenance schedule in your MerCruiser owner's manual. Most engines should get an oil change every 100 hours, or annually.

**How do you test for alpha one?** Alpha-1 antitrypsin (AAT) testing uses a sample of blood or a cheek swab to diagnose a condition called alpha-1 antitrypsin deficiency (AAT deficiency). This condition is sometimes known as "alpha-" or AATD.

**Are all alpha one gen 1 lower units the same?** All Alpha I's Lower Unit (not the Pre Alpha with the lift ring/or the pre-load nipple on top of the shaft) are interchangeable. The difference in the gear ratio will be in the Upper Unit. Alpha I Gen II not interchangeable.

**How do I choose the right gear ratio?** First you need to determine if the primary goal is acceleration, top speed, or best fuel mileage. Next, you need to confirm your vehicle's measurements. There are three elements involved in determining the best gear ratio: engine rpms, vehicle speed, and tire diameter.

**What is the problem with the Mercruiser Alpha One?** Common issues with Mercruiser Alpha One Gen 1 & Gen 2 include water pump failures and shift cable problems. Corrosion and gear wear are also common concerns. Mercruiser Alpha One Gen 1 & Gen 2 are popular marine drive systems known for their reliability and performance.

**How much oil goes in a Alpha One Outdrive?** The Alpha One holds about 2 quarts of Mercruiser Premium Gear Lube. More if you have a remote Drive Lube Reservoir. We like to get 3 quarts of Mercruiser Premium Gear Lube and we use part of the first quart to flush through the drive to clean out some of the older lube.

**What is the top speed of Alpha One?** German company AQAForce strapped their F120 Lehmann motor onto a stern drive to create an electrified Mercruiser Alpha 1 that has this 6.4m / 20? runabout hitting a top speed of 78kmh / 46mph / 40kts.

**How can you tell the difference between Alpha 1 Gen 1 and Gen 2?**

**What is the difference between Alpha One and Bravo One?** not going to be much difference between an alpha 1 and a bravo 1 except that the bravo is a beefier drive, and can put up with more punishment. Both drives will pretty much perform the same. The bravo will shift better/smoother because of the clutch that it uses vs the alpha.

**How much gear oil is in alpha one gen 2?**

**What is the difference between one Gen 1 and Gen 2?** Sonos One Gen 1 vs. Gen 2. Sonos recently updated the One with a faster processor and more memory, as well as Bluetooth Low Energy (BLE) support. BLE is only used as an option for setting up the speaker, and Bluetooth audio streaming is not present on this new model, which the company is calling the Sonos One Gen 2.

**What is the difference between Alpha One and Alpha Two?** Alpha 1 receptors are the classic postsynaptic alpha receptors and are found on vascular smooth muscle. They determine both arteriolar resistance and venous capacitance, and thus BP. Alpha 2 receptors are found both in the brain and in the periphery. In the brain stem, they modulate sympathetic outflow.

**How can you tell the difference between a Gen 1 and Gen 2 Coyote?** Gen-2 Coyote The Gen-2 came with what could be considered as-cast BOSS heads, equipped with stiffer springs than the original Gen-1 had seen. The valves jumped to 37.3mm intake and 31.8mm exhaust from the original 37mm intake and 31mm exhaust.

**What is the difference between one Gen 1 and Gen 2?** Sonos One Gen 1 vs. Gen 2. Sonos recently updated the One with a faster processor and more memory, as well as Bluetooth Low Energy (BLE) support. BLE is only used as an option for setting up the speaker, and Bluetooth audio streaming is not present on this new model, which the company is calling the Sonos One Gen 2.

**What is the difference between Alpha 1 and 2?** Alpha 1 receptors are the classic postsynaptic alpha receptors and are found on vascular smooth muscle. They determine both arteriolar resistance and venous capacitance, and thus BP. Alpha 2 receptors are found both in the brain and in the periphery.

**What is the difference between LT1 Gen 1 and Gen 2?** The Gen 2 LT1's most significant update over the Gen 1 small-block was a reverse-flow cooling system, which cooled the cylinder heads first to achieve lower cylinder temperatures. That allowed a higher, 10.4:1 compression ratio that helped achieve greater power: 300 hp at 5,000 rpm and 330 lb-ft of torque at 4,000 rpm.

**How do I know what MerCruiser I have?** The model of Mercruiser engine can be determined by looking at the last letters of the "engine block code" that is stamped in all complete longblocks by General Motors at the time of assembly.
