ACLs and QoS: A Comprehensive Guide**

Can ACLs be applied to QoS?

Yes, Access Control Lists (ACLs) can be applied to Quality of Service (QoS) configurations to control which traffic receives priority treatment.

What is QoS configuration?

QoS configuration involves specifying the priority levels for different types of network traffic to ensure that critical applications receive the necessary bandwidth and latency.

Where should ACLs be applied?

ACLs should be applied at strategic points in the network, such as:

- Interfaces on routers and switches
- Subinterfaces on routers
- VLANs
- VPN tunnels

Is ACL on router or firewall?

ACLs can be applied on both routers and firewalls. Routers primarily use ACLs for traffic filtering and QoS, while firewalls utilize ACLs for security purposes.

Should I enable QoS or not?

Enable QoS if your network experiences congestion or if you want to prioritize certain types of traffic. QoS can improve application performance and user experience.

What is the best QoS setting?

The optimal QoS setting depends on the specific needs of your network. Experiment with different settings to find the best configuration for your environment.

Can QoS cause packet loss?

Yes, improper QoS configuration can lead to packet loss if the network is oversubscribed. Ensure that the QoS settings are appropriate for the available bandwidth.

What can ACLs be applied to?

ACLs can be applied to:

- IP addresses
- Ports
- Protocols
- VLANs
- MAC addresses
- QoS levels

Can ACLs be applied to address translation?

Yes, ACLs can be applied to address translation to control which IP addresses are translated and which are not.

How is QoS implemented in VLAN 802.1 Q?

QoS is implemented in VLAN 802.1 Q by using priority tags to differentiate traffic and assign different levels of service.

Can ACLs be applied on ServiceNow?

Yes, ACLs can be applied on ServiceNow to control access to specific records or tables based on user roles and permissions.
