The Cult of Personality Testing: How Personality Tests Are Leading Us to Miseducate Our Children

Personality testing has become increasingly popular in recent years, with tests being used to assess children's strengths and weaknesses, determine their learning styles, and even predict their future success. However, a growing body of research is casting doubt on the validity and efficacy of these tests.

What are the problems with personality tests?

One of the biggest problems with personality tests is that they are often based on flawed assumptions about human behavior. For example, many personality tests assume that people are static and unchanging, when in reality our personalities are constantly evolving. Additionally, personality tests often rely on subjective self-reporting, which can be biased or inaccurate.

How are personality tests being used in schools?

Personality tests are often used in schools to identify children who need additional support or to place them in different learning groups. However, there is little evidence to support the use of personality tests for these purposes. In fact, some studies have shown that personality tests can actually lead to discrimination against certain groups of children.

What are the alternatives to personality testing?

There are a number of more effective alternatives to personality testing that can be used to assess children's strengths and weaknesses. These include:

- **Observation:** This involves observing children in different settings to identify their interests, abilities, and learning styles.
- **Interviews:** This involves talking to children about their thoughts, feelings, and experiences.
- **Performance-based assessments:** This involves ?????????? ????? on their actual performance on tasks, rather than their self-reported personality traits.

What should parents do?

If you are considering having your child take a personality test, it is important to be aware of the limitations of these tests. You should also talk to your child's teacher or another trusted adult to get their input on whether or not testing is appropriate. It is also important to remember that personality tests are just one piece of information that can be used to understand a child. There are many other factors, such as a child's family background, experiences, and environment, that can also play a role in their development.
