## **SL Arora Physics Class 11: Comprehensive Q&A Guide**

### **Introduction**

SL Arora's Physics Class 11 textbook is a highly regarded resource for students preparing for JEE Main and Advanced examinations. Known for its lucid explanations and ample numerical examples, it presents concepts in a clear and concise manner. This article provides a comprehensive guide to possible questions and their answers from the textbook.

### **Paragraph 1: Units and Measurements**

- **Question:** Define measurement and state its importance in Physics.
- **Answer:** Measurement involves comparing an unknown quantity to a known standard. It allows for accurate and consistent determination of physical properties.
- **Question:** Convert 50 cm to meters.
- **Answer:**  $50 \text{ cm} = 0.5 \text{ m}$

### **Paragraph 2: Motion in a Straight Line**

- **Question:** State Newton's first law of motion and explain its implications.

- **Answer:** Newton's first law states that an object at rest will remain at rest, and an object in motion will maintain constant velocity unless acted upon by an external force. This law is fundamental to understanding the behavior of moving objects.
- **Question:** A car travels 100 km in 2 hours. Calculate its average velocity.
- **Answer:** Average velocity = Distance / Time = 100 km / 2 h = 50 km/h

### Paragraph 3: Motion in a Plane

- **Question:** What are the components of a vector? How can they be resolved?
- **Answer:** A vector has both magnitude and direction. It can be resolved into components parallel and perpendicular to a chosen axis using trigonometry.
- **Question:** A particle moves 10 m north and then 5 m east. What is the magnitude of its displacement?
- **Answer:** Magnitude of displacement =  $\sqrt{10^2 + 5^2}$  m = 11.18 m

### Paragraph 4: Laws of Motion

- **Question:** Explain Newton's third law of motion with an example.
- **Answer:** Newton's third law states that for every action, there is an equal and opposite reaction. For example, when a book rests on a table, the book exerts a force on the table (action), and the table exerts an equal and opposite force back on the book (reaction).

- **Question:** A force of 20 N is applied to a 5 kg object. What is the acceleration produced?
- **Answer:** Acceleration = Force / Mass = 20 N / 5 kg = 4 m/s<sup>2</sup>

### Paragraph 5: Work, Energy, and Power

- **Question:** Define work done and state its units.
- **Answer:** Work done is the transfer of energy due to the application of a force. Its SI unit is joule (J).
- **Question:** A block is lifted vertically through a height of 2 m with a constant force of 100 N. Calculate the work done.
- **Answer:** Work done = Force × Displacement = 100 N × 2 m = 200 J
