Bagaimana proses pembentukan ikatan logam? Ikatan logam terbentuk akibat adanya gaya tarik menarik antara muatan positif dari inti atom logam dan muatan negatif dari elektron valensi yang bebas bergerak dalam kisi kristal. Kekuatan ikatan logam ditentukan oleh besarnya gaya tarik-menarik antara ion-ion positif dan elektron-elektron bebas.

Bagaimana logam diproduksi? Penempaan, pengepresan, pembengkokan, pembentukan, dan pemesinan adalah fabrikasi logam penting yang digunakan untuk membentuk potongan logam individual. Proses lain, seperti pengelasan dan perakitan, digunakan untuk menyatukan pembuatan komponen logam yang berbeda.
