The Blind Light: Unlocking the Mysteries of Cataracts

What are Cataracts?

Cataracts are a clouding of the eye's natural lens, which sits behind the iris and pupil. As we age, proteins in the lens can clump together, blocking light from reaching the retina and causing vision impairment.

What are the Symptoms of Cataracts?

Cataracts typically develop gradually, with symptoms including:

- Blurred vision
- Difficulty seeing at night
- Seeing halos around lights
- Faded colors
- Sensitivity to glare

How are Cataracts Treated?

Cataract surgery is the only effective treatment for cataracts. During surgery, the clouded lens is removed and replaced with an artificial lens implant.

What is the Risk of Cataract Surgery?
