Accounting Principles: A Comprehensive Overview\*\*

### **Understanding the 9th Edition of Accounting Principles**

The 9th edition of accounting principles, more commonly known as the Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC), is a comprehensive framework that establishes the accounting and reporting standards used in the United States. It provides guidance on how financial transactions should be recorded, classified, and reported.

### **The 13 Principles of Accounting**

The 13 principles of accounting are a set of fundamental concepts that guide the preparation of financial statements. They include:

- Accrual accounting
- Consistency
- Good faith
- Going concern
- Matching
- Materiality
- Monetary unit
- Prudence
- Regularity

- Sincerity
- Timeliness
- True and fair view
- Uniformity

## Distinguishing Between IFRS 9 and GAAP

IFRS 9 and GAAP are two different sets of accounting standards. IFRS 9, issued by the International Accounting Standards Board (IASB), is the international standard for financial reporting. GAAP, developed by the FASB, is the accounting standard in the United States.

The main difference between IFRS 9 and GAAP lies in the treatment of financial instruments. IFRS 9 uses a forward-looking approach, while GAAP uses a historical cost approach.

## The 12 GAAP Principles with Examples

GAAP consists of 12 principles that provide guidance on financial reporting. Examples include:

- **Consistency:** Using the same accounting methods from period to period (e.g., FIFO for inventory)
- **Good faith:** Reporting financial information accurately and without bias (e.g., disclosing potential risks)
- **Materiality:** Identifying and reporting only information that is significant enough to affect user decisions (e.g., disclosing a major lawsuit)

## The Four GAAP Rules

GAAP also encompasses four basic rules:

- **Objectivity:** Financial statements should be free from bias and prepared with objectivity.
- **Prudence:** Conservatism should be exercised when reporting financial information.

- **Regularity:** Financial statements should comply with applicable laws and regulations.
- **Uniformity:** Similar accounting methods should be used consistently across all periods and companies.

### **IFRS: Principles and Number**

IFRS consists of a comprehensive set of principles, which are not explicitly stated as a specific number. However, these principles are embedded in the framework's requirements and interpretations.

### **Canada's Use of IFRS and GAAP**

Canada has adopted IFRS for publicly accountable enterprises. However, certain industries, such as insurance, may still use GAAP for regulatory reporting purposes.

### **Countries Using GAAP**

GAAP is primarily used in the United States and a few other countries, including:

- Japan
- South Korea
- Vietnam
- Philippines

### **GAAP vs. IFRS: A Better Standard?**

The debate over which standard is better depends on factors such as the specific industry, geographical location, and user needs. IFRS is generally considered more comprehensive and globally accepted, while GAAP provides more detailed guidance in certain areas.
