**What are the 3 R's involved in a good driver's behavior?** Read the road ahead. Reduce your speed. Drive to the Right.

**Which of the following are examples of common driving errors?**

**What is the I in the defensive driver success formula?** I—Identify—Locate potential hazards within the driving scene. P—Predict—Judge where the possible points of conflict may occur. D—Decide—Determine what action to take, when, and where to take it. E—Execute—Act by maneuvering the car to avoid conflicts.

**What are the three basic steps in the NSC collision prevention formula Quizlet?** Session 2: What are the three basic steps in the NSC Collision Prevention Formula? Recognize, Understand, Act. Session 2: Which one of the following is a way to focus your attention on driving so that you can recognize a hazard and understand the defense against it?

**What is the three seconds rule in driving?** A general rule that helps many drivers maintain safe following distances is the “three-second rule.” It requires leaving three seconds of space between your vehicle and the vehicle driving in front of you. If you are interested in forming safer driving habits, you need to understand and implement the three-second rule.

**What are the 3 riskiest driving behaviors?**

**What is the number one fatal mistake made by drivers?** Driving on the Wrong Side of the Road This is obviously a mistake that people do not expect to have to

avoid, and that's likely why so many fatalities result from this serious error.

**What are the three S's to remember to avoid a head-on crash?**

**What is the most common mistake drivers make?**

**What is the 1 2 1 method of driving?** '121' refers to the number of turns: one turn towards the kerb, two turns the other way at the 45-degree angle, and one turn to straighten up once the vehicle is parallel with the kerb. The following guide assumes you are parking in a space with vehicles to the front and rear, on the right-hand side of the road.

**What is the single most important ingredient of defensive driving?** Look ahead. A driver with defensive driving skills scans the road ahead of them and behind them. They ensure road safety by scanning ahead at least ten seconds, a quarter of a mile, or to the next intersection to ensure they have enough time to avoid potential dangers.

**Who is statistically better drivers?** Despite the stereotype that men have better control over their vehicle, women are statistically more reliable drivers than their male counterparts. According to The New York Times, male drivers of cars and vans had twice the rate of fatal accidents per mile driven.

**What is the number one unsafe driving behavior?** Distracted driving is one of the top most dangerous driving habits and it's an issue that plagues many drivers. Distraction can come in different forms, including texting while driving, eating, drinking or simply not paying attention to the road.

**How many seconds following distance?** The National Safety Council recommends a minimum three-second following distance.

**What is the first thing you should do upon entering your vehicle?**

**What are the three drivers of behavior?** Psychology, sociology and the environment are the main drivers of behaviour. Drivers of behaviour can be diagnosed and analysed at a more general (factors) or granular level (dimensions).

**What are the three elements of driving?**

**What are the three basics of driving?**

**What are the 3 things that are results of driver distraction?** Driver distractions reduce your awareness to the driving environment, your decision-making process, and your driving performance. This results in collisions or near collisions that require you and/or other drivers on the road to take corrective actions.

**What is the theory of relativity for laymen?** The theory of relativity was revolutionary because it showed how the speed at which time happens is mutable; that space and time are not discrete entities: time and space and motion (ie, movement through space) collapse into a fourth dimension, in which all act on each other.

**What is the book that explains the theory of relativity?** Relativity: The Special and the General Theory (German: Über die spezielle und die allgemeine Relativitätstheorie) began as a short paper and was eventually published as a book written by Albert Einstein with the aim of explaining the theory of relativity. The original 1920 English publication of the paper.

**What is the theory of relativity in layman's terms?** What is general relativity? Essentially, it's a theory of gravity. The basic idea is that instead of being an invisible force that attracts objects to one another, gravity is a curving or warping of space. The more massive an object, the more it warps the space around it.

**What is the principle of relativity for dummies?** This principle states that the laws of physics must take the same form in all coordinate systems. In other words, all space-time coordinates are treated the same by the laws of physics — in the form of Einstein's field equations.

**What is the paradox in the theory of relativity?** For example, suppose that one of two identical twin sisters flies off into space at nearly the speed of light. According to relativity, time runs more slowly on her spacecraft than it does on Earth; therefore, when she returns to Earth, she will be younger than her Earth-bound sister.

**How true is the theory of relativity?** The predictions of special relativity have been confirmed in numerous tests since Einstein published his paper in 1905, but three experiments conducted between 1881 and 1938 were critical to its validation. These

are the Michelson–Morley experiment, the Kennedy–Thorndike experiment, and the Ives–Stilwell experiment.

**What is the basic idea of theory of relativity?** Relativity is a theorem formulated by Albert Einstein, which states that space and time are relative, and all motion must be relative to a frame of reference. It is a notion that states' laws of physics are the same everywhere. This theory is simple but hard to understand.

**What is the theory of relativity for kids?** " The motion of one thing is always relative to the motion of everything else. Special relativity also says that light always travels at the same speed in empty space, 186,000 miles per second. So in one second, light could travel all the way around the planet Earth about seven and a half times!

**What is the theory of relativity in few words?** Special relativity is an explanation of how speed affects mass, time and space. The theory includes a way for the speed of light to define the relationship between energy and matter — small amounts of mass ( $m$ ) can be interchangeable with enormous amounts of energy ( $E$ ), as defined by the classic equation  $E = mc^2$ .

**What is relativity simplified?** General relativity is a physical theory about space and time and it has a beautiful mathematical description. According to general relativity, the spacetime is a 4-dimensional object that has to obey an equation, called the Einstein equation, which explains how the matter curves the spacetime.
