**What is the graf method of ultrasound of the hip?** The Graf method consists of the evaluation of a conventional coronal view with the patient in the lateral position, providing qualitative and quantitative assessments of the hip. The Graf method classifies the degree of coverage of the bony acetabular roof (alpha angle) and cartilaginous acetabular roof (beta angle).

**What degree is hip dysplasia 57 degrees?** A type IIa- hip is at risk to develop dysplasia. So an alpha angle of 56 degrees at the age of 7 weeks is called type IIa+, while at the age of 10 weeks it is called a type IIa-. If a child is older than 3 months or 13 weeks, then an alpha angle of 50-59 degrees is considered a sign of dysplasia, i.e type IIb.

**What is a graf score for a hip?** Graf score is a widely used ultrasound grading score to evaluate DDH in infants. There is conflicting evidence regarding the management of the developmentally immature Graf type IIa hip. Some physicians adopt watchful waiting for natural maturation of hips while other early treatment.

**What is the graf classification of DDH?** The Graf method allows us to classify DDH according to its severity into ultrasound stable (hip types I-IIc) and unstable hips (hip type D to IV) (6) ( Table 1).

**What are the 5 F's of hip dysplasia?** One in 1,000 children is born with a dislocated hip, and 10 in 1,000 children are born with hip subluxation or dysplasia<sup>1</sup>. Risk factors include the 5 Fs: First-born, Feet-first (breech), Female, Flexible

(hyperlaxity syndromes), and a positive Family history of DDH.

**What is the 50% rule for hip ultrasound for developmental dysplasia?** The images can generally show how far out of the socket the hip will move. Of course, this depends on how hard the examiner pushes. In general more than 50% of the ball should remain in the socket. When the number is less than 45% then there is instability.

**What is the normal angle for an infant's hip ultrasound?** An  $\alpha$  angle greater than  $60^\circ$  is graded as a normal hip (type I); these patients require no treatment [4]. If the  $\alpha$  angle is  $50^\circ$ - $59^\circ$  in infants less than 3 months of age (Fig. 6), it is considered a type IIa immature hip; that is, the hip is normally located, but the bony acetabulum promontory is rounded.

**How to create Android app in Eclipse step by step?**

**Which tool is commonly used for Android development in the Eclipse IDE?**

Android Development Tools (ADT) is a plugin for the Eclipse IDE that is designed to give you a powerful, integrated environment in which to build Android applications.

**Is Eclipse better than Android Studio?** The key difference between Android Studio and Eclipse is that the Android Studio is an Integrated Development Environment (IDE) particularly developed for Android applications while Eclipse is an integrated development environment that is largely used for Java-based application development.

**Do developers still use Eclipse?** Some of us definitely still use Eclipse. It's quite popular. Though more of us probably use IntelliJ IDEA. Some of us use NetBeans.

**How much time will it take to learn Java for Android app development?** It would take 3-4 months to learn essential Java skills that lead to android programming. It will take 1 to 1.5 years to master the same. In summary, if you are a newbie, it is anticipated that it will take you two years to gain a good understanding of mobile development and begin working on OrientMCT projects.

**Is Java enough for Android app development?** Created back in 1995, Java has been the go-to language for several waves of web and app developers. It has also been the key player in Android development since the beginning of the mobile OS, largely due to Google's choice to use the language for its Android SDK.

**Do people still use Java for Android development?** The answer is a resounding yes! Even though there are newer languages out there, Java has remained popular due to its versatility and robustness. It can be used for everything from developing Android apps to building enterprise-level applications.
