4th Grade Math SLO Example

Question:

What is the area of a rectangle with a length of 12 cm and a width of 8 cm?

Answer:

The area of a rectangle is calculated by multiplying the length by the width. Therefore, the area of the rectangle is $12 \text{ cm} \times 8 \text{ cm} = 96 \text{ cm}^2$.

Question:

A farmer has 24 chickens and 18 pigs. How many legs do all of the animals have in total?

Answer:

Chickens have 2 legs and pigs have 4 legs. To find the total number of legs, we need to multiply the number of animals of each type by the number of legs per animal. Therefore, the total number of legs is $(24 \times 2) + (18 \times 4) = 144$ legs.

Question:

A grocery store sells bananas in bags of 5. If you want to buy 17 bananas, how many bags do you need to buy?

Answer:

Since there are 5 bananas in each bag, we can divide the total number of bananas by 5 to find the number of bags needed. Therefore, you need to buy $17 \text{ bananas} / 5$

= 3.4 bags. However, since you cannot buy a fraction of a bag, you would need to buy 4 bags.

Question:

A water park charges an admission fee of \$25 for adults and \$15 for children. If there were 120 adults and 80 children who visited the park on a certain day, what was the total amount of money collected?

Answer:

To find the total amount of money collected, we need to multiply the number of adults by the adult admission fee and the number of children by the child admission fee, and then add the two amounts. Therefore, the total amount of money collected is $(120 \times \$25) + (80 \times \$15) = \$3,000 + \$1,200 = \$4,200$.

Question:

A school bus travels 120 miles in 2 hours. What is the average speed of the bus?

Answer:

Average speed is calculated by dividing the distance traveled by the time taken. Therefore, the average speed of the bus is $120 \text{ miles} / 2 \text{ hours} = 60 \text{ miles per hour}$.
