How do you maintain an embroidery machine? Keep your embroidery machine in a clean and dust-free environment. Avoid exposing it to direct sunlight or extreme temperatures. When not in use, cover the machine with a dust cover to prevent dust and debris from settling on its surfaces.

When should I service my embroidery machine? Therefore, it is vitally important that embroidery machines are regularly serviced (at least every 12 months). If a large amount of work is done with the machine (more than 10 hours a week), then a 6 monthly cycle is recommended.

What is the C point error on the Happy Embroidery Machine? Common Error Codes E-050 C-Point – machine has failed to return the main shaft position to its at-rest position (270 degrees) after it last stopped. If AUTO does not clear this error, access the main shaft dial by removing the round black rubber access cap, disable the brake, insert a 4?

Do you oil an embroidery machine? Generally speaking, embroidery machines require oil on the main moving parts: the bobbin case, the needle bar, etc.

Where do you put oil in an embroidery machine?

How often should I change the needle in my embroidery machine? The best indication of when to change the needle is when its performance begins to fall off. A good rule of thumb - if a particular needle breaks threads more than once during a

run, replace the needle.

How long do embroidery machines last? As long as you are following the maintenance tips and consistently cleaning up your machine and maintaining it, your machine can last you for years to come.

When should I slow down my embroidery machine? If you're embroidering in heavy materials such as leather and vinyl or in very light fabrics that naturally tend to pucker, you'll need to slow your machine down. Generally, the faster the machine goes, the more pull you'll have in the machine's tension, which will increase the probability of puckering.

What is the service count on an embroidery machine? - The Service Count is the number of stitches since the last time the machine was serviced. - The Total Count is the total number of stitches sewn on the machine.

How do I calibrate my embroidery machine?

What causes looping in embroidery?

Why is my machine embroidery puckered? So why does puckered embroidery generally happen? If the fabric moves while your machine stitches, it will bunch up instead of lying flat. Therefore, keeping your fabric in place while stitching out an embroidery design is the secret to avoiding puckering.

What oil to use on an embroidery machine? We recommend that you use only sewing machine oil. We do not recommend that you use the 3 in 1 oil. Use of any other type of oil may result in damage to the embroidery machine.

Can you use an embroidery machine without stabilizer? While they may get you by in a pinch, it is always best to use stabilizers and products designed specifically for embroidery. (Note from Bonnie: Quality stabilizers have been thoroughly tested to give you the very best results with the longest life for your precious projects.)

Is embroidery stabilizer necessary? Without a stabilizer, that fabric you're stitching or using an embroidery machine on might stretch, pucker, or even tear under the pressure of all those intricate stitches. Embroidery stabilizer keeps everything in place, making sure your fabric stays flat and smooth while you work your creative

magic.

How long do embroidery machines last? As long as you are following the maintenance tips and consistently cleaning up your machine and maintaining it, your machine can last you for years to come.

What can I use to stabilize embroidery? The answer is: a cut-away stabilizer! This embroidery stabilizer can be used for any fabric, but is essential for knitted and stretchy fabrics. Because the fabric is stretchy, the embroidery design would also expand during embroidery.

Do you need stabilizer for embroidery machine? Stabilizer is the foundation of your embroidery and is a necessity to support your fabric and thread. Without the use of the proper stabilizer the registration of the design may be off, you might have puckering, and your fabric may distort. Your choice of stabilizer can “make or break” your stitch out.

How do you take care of embroidery? Avoid storing or displaying your embroidery in areas with high humidity and little airflow. Use archival-quality waterproof boxes if storing your embroidery for a long period of time. Avoid contact with water as it can cause the watercolor paint on the fabric to run.
