**What reaction is never redox?** In a redox reaction, the oxidation number of elements changes. Double-replacement reactions and acid-base reactions are not redox reactions as they involve recombination of ions or transfer of a hydrogen ion, respectively, without any transfer of electrons.

**Which reaction is always redox?** Final answer: Combination and decomposition reactions are always redox reactions. Redox reactions involve shifts of electrons between substances, a process characterized by both reduction and oxidation. In combination and decomposition reactions, oxidation states of elements change, hence they are redox reactions.

**Is  $\text{CaCO}_3$  a redox reaction?** Correct option a  $\text{CaCO}_3 \rightarrow \text{CaO} + \text{CO}_2$  Explanation: Redox reaction means the reaction in which oxidation as well as reduction takes place simultaneously. In this reaction there is no change in oxidation

number of any atom. Hence this reaction is not a redox reaction.
