Section 8: Covalent Bonding

Question 1: What is covalent bonding?

Answer: Covalent bonding is a type of chemical bond formed when two atoms share one or more pairs of electrons. Each atom contributes one or more electrons to form a shared electron pair, creating a strong bond.

- **Community building:** Sharing platforms and cooperatives foster social connections and a sense of belonging for individuals who feel marginalized.

What are the potential consequences?

While the activities of the moral underground are generally considered ethical, they can sometimes violate laws or regulations. Participants may face legal consequences, such as fines or imprisonment. Additionally, some traditional businesses may view these activities as a threat to their profits.

What does the future hold for the moral underground?
