**What method is used to test disinfectants and antiseptics?** The disk-diffusion method involves applying different chemicals to separate, sterile filter paper disks (Figure 13.31). The disks are then placed on an agar plate that has been inoculated with the targeted bacterium and the chemicals diffuse out of the disks into the agar

where the bacteria have been inoculated.

**What determines the effectiveness of a disinfectant?** Chemical ingredient(s): Disinfectant products have different active ingredients. This affects what microorganisms it can kill. The product label will list what it is effective against. Concentration used: Disinfectants are tested to determine the best concentration to use for certain microorganism.

**What are the 5 elements influencing the effectiveness of the disinfectant?**

**What is the phenol coefficient test for disinfectant?** The test calculates the phenol coefficient by dividing the highest dilution of test disinfectant that destroys a microorganism in a given time by the highest dilution of phenol that destroys the same microorganism in the same amount of time.

**What is the test used for the evaluation of disinfectant?** BS EN 14476: Virucidal quantitative suspension test for chemical disinfectants and antiseptics used in human medicine. BS EN 14675: Quantitative suspension test for the evaluation of virucidal activity of chemical disinfectants and antiseptics used in the veterinary area.

**Which type of test is used to determine whether disinfectant solutions actively used in a clinical setting are being used correctly?** In-Use Test. An in-use test can determine whether an actively used solution of disinfectant in a clinical setting is microbially contaminated. A 1-mL sample of the used disinfectant is diluted into 9 mL of sterile broth medium that also contains a compound to inactivate the disinfectant.

**What is the AOAC test for disinfectants?** The AOAC Use-Dilution test is executed by soaking stainless steel carriers in bacteria, treating them with the disinfectant, and then determining if there are any surviving bacteria after placing the carriers into a growth media.
