Winningham Nursing Case Studies: Respiratory

Case Study 1: Asthma Exacerbation

- **Question:** A 25-year-old male presents to the emergency department with shortness of breath, wheezing, and chest tightness. He has a history of asthma. Vital signs reveal a respiratory rate of 28/min, pulse oximetry of 88%, and blood pressure of 140/90 mmHg.

- **Answer:** The patient is likely experiencing an asthma exacerbation. Treatment includes high-flow oxygen therapy, bronchodilators (e.g., albuterol), and systemic corticosteroids (e.g., prednisone).

Case Study 2: Pneumonia

- **Question:** A 68-year-old female presents with a 3-day history of cough, fever, and chills. Chest auscultation reveals crackles in the right lower lobe. A chest X-ray confirms pneumonia.
- **Answer:** The patient has community-acquired pneumonia, likely caused by *Streptococcus pneumoniae*. Treatment includes antibiotics (e.g., amoxicillin-clavulanate), antipyretics, and rest.

Case Study 3: Respiratory Distress Syndrome (ARDS)

- **Question:** A 30-year-old male with sepsis and acute lung injury develops sudden respiratory distress. Chest X-ray reveals bilateral infiltrates, and arterial blood gas analysis shows severe hypoxemia ($\text{PaO}_2 < 60$ mmHg).
- **Answer:** The patient is experiencing ARDS. Treatment includes mechanical ventilation, fluid management, and antibiotics.

Case Study 4: Pleural Effusion

- **Question:** A 45-year-old female with a history of congestive heart failure presents with shortness of breath and a cough. Chest auscultation reveals decreased breath sounds on the left side. A chest X-ray shows a left-sided pleural effusion.
- **Answer:** The patient has a transudative pleural effusion caused by her heart failure. Treatment includes diuretics, fluid restriction, and potentially a thoracentesis to remove the fluid.

Case Study 5: Pulmonary Embolism

- **Question:** A 50-year-old male with a history of deep vein thrombosis presents with sudden chest pain, shortness of breath, and hemoptysis. A CT angiogram confirms a pulmonary embolism.

- **Answer:** The patient has a pulmonary embolism. Treatment includes anticoagulants (e.g., heparin), oxygen therapy, and thrombolytic therapy in severe cases.
