Term 1 Mathematics Investigation Grade 11 2015

Question 1:

What are the factors that influence the cost of producing a good or service?

Answer:

- **Fixed costs:** These costs do not change with the level of production, such as rent, salaries, and insurance.
- **Variable costs:** These costs vary with the level of production, such as raw materials, labor, and utilities.
- **Economies of scale:** As the level of production increases, the average cost of producing each unit decreases.
- **Learning curve:** As workers become more proficient, the time required to produce each unit decreases, resulting in lower costs.
- **Technology:** Advances in technology can lead to lower production costs.

Question 2:

Explain the concept of marginal cost and how it can be used to optimize production.

Answer:

Marginal cost is the additional cost incurred by producing one more unit of a good or service. It is used to optimize production by determining the level of output where marginal cost equals marginal revenue. This point represents the profit-maximizing output level.

Question 3:

Discuss the different types of market structures and their impact on pricing.

Answer:

- **Perfect competition:** Many buyers and sellers, each with a small market share, resulting in prices determined by supply and demand.
- **Monopoly:** One seller controls the entire market, leading to higher prices than in perfect competition.

- **Oligopoly:** A few dominant firms control the market, leading to less competition and higher prices.
- **Monopolistic competition:** Many sellers with differentiated products, resulting in some competition and pricing flexibility.

Question 4:

Explain the theory of elasticity and its implications for pricing strategy.

Answer:

Elasticity measures the responsiveness of demand or supply to changes in price. If demand is elastic, a small price increase will lead to a significant decrease in demand. Pricing strategies aim to maximize revenue by considering price elasticity.

Question 5:

Discuss the ethical implications of pricing decisions.

Answer:

Pricing decisions should balance profit maximization with ethical considerations. Ethical issues include:

- **Exploiting consumers:** Pricing products at excessively high levels that take advantage of consumers' needs.
- **Predatory pricing:** Setting prices below cost to drive competitors out of the market.
- **Deceptive pricing:** Misleading consumers about the true cost of products or services.
