Wiring Guide to IFM Safety Light Curtains and Safety Relays

Question: How do I wire a Type 4 safety light curtain to an IFM SR5000 safety relay?

Answer: Connect the light curtain power supply to the relay terminals 13 (+24VDC) and 14 (0VDC). Connect the light curtain outputs to terminals 11 and 12. Connect the safety relay outputs to the machine's safety circuit (e.g., emergency stop, interlock switch).

Question: What type of cable do I use for wiring safety light curtains?

Answer: Use a shielded, multi-core cable with a suitable cross-sectional area (e.g., AWG 24-18). The cable shield should be connected to the device ground terminal.

Question: How do I wire multiple safety light curtains to one safety relay?

Answer: Use a "cascade" or "series" wiring configuration. Connect the output of the first light curtain to the input of the second light curtain, and so on. Connect the final light curtain output to the safety relay.

Question: What is the purpose of the "muting" function in safety light curtains?

Answer: The muting function allows the light curtain to be temporarily disabled during specific machine operations (e.g., material handling). This prevents accidental machine start-up while ensuring safety when the light curtain is re-enabled.

Question: How do I troubleshoot a safety relay that is not detecting a light curtain signal?

Answer: Check the following:

- Power supply to the light curtain and relay
- Cable connections and cable integrity
- Light curtain alignment and range
- Safety relay programming and configuration
