- **1. Atoms in Motion (Brownian Motion):**

- Q: What explains the erratic movement of pollen grains suspended in water?
- A: Brownian motion, caused by collisions between atoms and the pollen grains.

- **2. What Is Light?:**

- Q: Is light a wave or a particle?
- A: Light exhibits both wave-like (e.g., diffraction) and particle-like (e.g., photoelectric effect) behaviors.

- **3. Relativity:**

- Q: Why does time slow down for moving objects?
- A: Special relativity states that time and space are relative to an observer's frame of reference.

- A: Chemical bonds and interactions between molecules create complex structures and enable metabolic processes.

- **5. Conservation of Energy:**

- Q: Where does energy go when it disappears?
- A: Energy cannot be created or destroyed, but it can be transformed into different forms or transferred to different systems.

- **6. Symmetry in Physics:**

- Q: Why does physics often involve equations that are symmetric or invariant under certain transformations?
- A: Symmetry reflects fundamental principles of nature and helps simplify calculations in complex systems.

Through these "easy pieces," Feynman provides a comprehensive and accessible introduction to the foundational concepts of physics, inspiring readers to appreciate the elegance and beauty of the physical world.
