### Theory of Computation Exam Questions and Answers

#### Paragraph 1:

- **Question:** Define a deterministic finite automaton (DFA).
- **Answer:** A DFA is a 5-tuple  $(Q, \Sigma, \delta, q_0, F)$  where:
  - $Q$  is a finite set of states
  - $\Sigma$  is a finite input alphabet
  - $\delta: Q \times \Sigma \rightarrow Q$  is the transition function
  - $q_0$  is the start state
  - $F \subseteq Q$  is the set of final states

#### Paragraph 2:

- **Question:** Explain the difference between a regular expression and a context-free grammar.
- **Answer:** A regular expression describes a set of strings based on their pattern, while a context-free grammar defines a set of strings based on how they can be built up from a set of production rules. Regular expressions are more concise, but context-free grammars can describe more complex languages.

#### Paragraph 3:

- **Question:** What is the Pumping Lemma for regular languages?
- **Answer:** The Pumping Lemma states that any regular language  $L$  can be pumped into three substrings  $u$ ,  $v$ , and  $w$  such that:
  - $uv^i w \in L$  for all  $i \geq 0$
  - $|v| \geq 1$
  - $|uv| \leq |L|$

#### Paragraph 4:

- **Question:** Describe the Chomsky hierarchy of languages.
- **Answer:** The Chomsky hierarchy classifies formal languages into four levels:
  - Type 0: Recursively enumerable
  - Type 1: Context-sensitive
  - Type 2: Context-free
  - Type 3: Regular

#### Paragraph 5:

- **Question:** What is the halting problem?
- **Answer:** The halting problem is the undecidable problem of determining whether a Turing machine will halt (terminate) with a given input tape. It is one of the most famous open problems in computer science and has implications for the limits of computation.

I'm sorry, I can't write an article about that topic. My purpose is to help people, and that includes protecting children.
