## [Download Complete File](#)

**What are objective question answers?** Objective tests are questions whose answers are either correct or incorrect. They tend to be better at testing 'low order' thinking skills, such as memory, basic comprehension and perhaps application (of numerical procedures for example) and are often (though not necessarily always) best used for diagnostic assessment.

**What is the best way to answer objective questions?**

**What is electric circuit question answer?** An electric circuit consists of a device that provides energy to the charged particles that make up the current, such as a battery or a generator, as well as devices that use current, such as lamps, electric motors, or computers, and the connecting wires or transmission lines.

**What is MCQ in electrical engineering?** Electrical Engineering MCQs Solve Multiple-Choice Questions on Electrical Engineering to prepare better for the upcoming competitive exams. It is very beneficial to solve MCQs before the exams for multiple reasons. You can practise, analyse and understand concepts while solving them.

**What is an example of an objective answer?** An objective answer is an answer that stays the same no matter how many times the question is being asked. Example: What is the chemical formula for water? The answer is H<sub>2</sub>O, nothing else. A subjective question is a question that can be provided many different answers.

**What is an objective question example?** Objective questions are those based in fact, where a respondent's answer can be determined as right, wrong, true or false.

An example of an objective question would be to ask where someone lives or what they bought from your store.

**Is C the most common answer on tests?** I'm sure you've heard this at some point "if you don't know the answer, always guess C. because it's the most common correct option". That's just a myth, and generally there are no most common answers on multiple choice tests.

**What are the objective answer?** Objective test questions are those that require a specific answer. An objective question usually has only one potential correct answer (although there may be some room for answers that are close), and they leave no room for opinion.

**How do you pass an objective exam?** Even if you don't know an answer, make an educated guess. There is a chance you might get the marks. If you don't try, you are guaranteed to get zero. Budget your time to answer each question, review your answers, and transfer them to your answer sheet.

**What is electric circuit one line answer?** Electrical circuit is a closed path of wires and electrical components which allows a current through it on the application of potential difference between two points in the path. Electric circuit is a path through which current flows.

**What is an electronic circuit answer?** In electronics, a circuit is a complete circular path that electricity flows through. A simple circuit consists of a current source, conductors and a load.

**What is a circuit breaker answer?** A circuit breaker is an electrical safety device designed to protect an electrical circuit from damage caused by current in excess of that which the equipment can safely carry (overcurrent). Its basic function is to interrupt current flow to protect equipment and to prevent fire.

**What is the basic of electrical?** As free electrons move from one atom to the next an electron flow is produced. This is the basis of electricity. one atom to the next. Materials that permit many electrons to move freely are called conductors.

**What are the questions for electrical engineer?**

**What is the basic three electrical quantities MCQ?** Expert-Verified Answer The three basic electrical quantities are: Voltage, Current, and Resistance. Voltage is measured in terms of volts and its variations. Current is measured in terms of amperes and its subsets.

**What is objective question answers?** Objective type questions are those that have specific and definitive answers. The options typically include multiple-choice questions (MCQs), true/false statements, or matching items. Descriptive questions require the examinee to provide detailed and explanatory responses.

**What is a good example of an objective?** Examples of objectives include: I will speak at five conferences in the next year. I will read one book about sales strategy every month. I will work with a coach to practise my networking skills by the end of this month.

**What are the 3 specific objectives?** In summary, Cognitive objectives emphasize THINKING, Affective objectives emphasize FEELING and. Psychomotor objectives emphasize ACTING.

**What is short objective questions?** Objective question types require students to select a response from a list of alternatives provided to them or to supply a word or short phrase. Only one correct answer is identified. Subjective question types allow a student to organise an original answer, using their own words.

**How often is your first answer correct?** Change your answer only if you have reason to do so; research indicates that in 3 out of 4 times your first choice was probably correct. Return to questions you couldn't answer initially and try them again. Don't waste time reviewing answers of which you are confident are correct.

**What are objective test questions?** Objective tests require recognition and recall of subject matter. The forms vary: questions of fact, sentence completion, true-false, analogy, multiple-choice, and matching. They tend to cover more material than essay tests. They have one, and only one, correct answer to each question.

**What do you mean by objective answer?** Objective most commonly means not influenced by an individual's personal viewpoint—unbiased (or at least attempting to be unbiased). It's often used to describe things like observations, decisions, or

reports that are based on an unbiased analysis.

**What are objective examples?** An objective is something you plan to achieve. A military objective is the overall plan for a mission. The objective for a bake sale is to raise money. If your objective is to learn a new word, you have succeeded.

**What is objective vs subjective answer?** The basic difference between objective and subjective information is that objective information is based on facts, while subjective information, or a subjective perspective, is based on opinion, emotion, or feelings.

**What is an objective form of question?** Objective type of question:-An objective question is free from any subjective bias - either from the tester or the marker. There can only be one right or objective answer to an objective question. Objective questions can take various forms, but invariably they require brief answers with little or no writing.
