What is physical science the study of _____ and _____?
Expert-Verified Answer. Physical science is the study of matter and energy. Physical scientists examine all the "stuff," or matter, in the world. They also identify forms of energy and try to figure out what happens to the energy in the universe.

In which of the following states of matter is the average distance between particles in a given substance typically the smallest? Solid: Solids are those, whose molecules are bounded tightly, hence the distance between them is the least. The molecules are fixed in a position. It has definite shape as well as mass.

We suggest technicians change a pulley whenever a timing belt or serpentine belt is changed and vice versa, but there are eight key warning signs to look out for when a pulley goes bad: Rock – Rock the pulley back and forth. There should be no movement or play from side to side.

Will a broken serpentine belt destroy my engine? Since the serpentine belt helps provide power to cool the engine, a faulty belt can cause the car engine to overheat as the water pump will not turn. As soon as the engine begins to overheat, have it inspected by a mechanic as it can cause a breakdown and cause engine damage if left overheated.

Can you run a serpentine belt without a tensioner? There may also be a separate idler pulley that helps the belt do its serpent-like snaking through the pulley-laden components. And, yes, that makes it so you never need to adjust the belt tension.

How do I check if my serpentine belt is bad? Visible Cracks and Wear Regular visual inspections of the serpentine belt can reveal important information about its condition. If you notice cracks, fraying, or signs of wear on the belt's surface, it's a clear indication that it needs replacement.

How would you identify a serpentine belt that needs replacement? Replacing a serpentine belt is an important part of vehicle maintenance and it often comes with a cost. Signs that the belt needs to be replaced include cracks, squeals, signs of extreme wear and tear, fraying, splitting or a missing portion of the ribbed surface.
