

NEONATAL STABLE PRETEST

ANSWER KEY

[Download Complete File](#)

What are the symptoms of a neonate with a pneumothorax may exhibit the following signs? Pneumothorax in the newborn sometimes causes no symptoms. However, it can be the cause of a newborn's rapid breathing. Newborns also may grunt when breathing out and may have a bluish color to their skin and/or lips (cyanosis).

Does mild hypothermia stimulate norepinephrine release? Hypothermia was found to depress both the norepinephrine efflux in response to stimulation and the contractile response to the endogenous norepinephrine released, as well as to exogenous norepinephrine.

Which organ may be most adversely affected by severe hypoglycemia? [9] The authors reported that severe, prolonged hypoglycemia caused extensive degeneration of the central nervous system and, if left untreated, ultimately resulted in death. [9] The brain damage was less severe in infants treated with exogenous glucose.

Which of the following methods are appropriate for rewarming a hypothermic preterm infant? Rewarm neonates in an incubator or under a radiant warmer and treat any underlying conditions. Prevent hypothermia by maintaining an appropriately warm environmental temperature in newborn care areas, immediately drying the neonate, and then swaddling full-term neonates or placing preterm infants in a polyethylene bag.

What are 3 signs and symptoms of a pneumothorax?

What are the signs and symptoms of pneumothorax quizlet? With a tension pneumothorax, you will quickly see hypotension, tachycardia, and dyspnea as the mediastinum shifts from the extra pressure in the intrapleural space on the affected side. A late sign of a tension pneumothorax is that the trachea will eventually shift to the unaffected side.

What stimulates the release of norepinephrine quizlet? How are epinephrine and norepinephrine released? In response to a short term stressful stimulus, nerve impulses travel from the hypothalamus to the spinal cord. From there, the nerve signals travel to the adrenal medulla, stimulating the secretion of epinephrine and norepinephrine.

How many questions are in the stable post test? Mixed Module post-test (8 questions) passing scores: The Candidate must score ? 75% (0, 1, or 2 questions wrong), on the first try. If the Candidate scores 3 or more wrong on the mixed module test, they are no longer a Candidate for Support instructor.

What are the 4 ways neonates lose heat? There are four mechanisms by which heat is lost 1) conduction, 2) convection, 3) radiation, and 4) evaporation. Conduction is the transfer of heat from one object to another by direct contact.

How to correct hypoglycemia in neonates? If BGL is 1.5–2.5 mmol/L and baby is ?35 w, well and feeding, give oral glucose gel 40% and ensure that the baby has an effective feed (feed at least 3 hourly). If BGL 2–2.6 mmol/L, administer a 2nd dose of oral glucose gel 40%. If BGL is 1.5 mmol/L admit the baby to neonatal unit and start IV glucose 10%.

What is the Whipple's triad? The symptoms of Whipple's triad have been used to describe hypoglycemia since 1938. For Whipple's triad, the practitioner must first recognize symptoms of hypoglycemia, then obtain low blood glucose, and finally, demonstrate immediate relief of symptoms by correcting the low blood glucose with glucose treatment.

What is the blood sugar protocol for newborns? What is the normal level of blood glucose in a baby? Blood glucose is measured in millimoles per litre (mmol/L). Newborn babies should be treated when a single blood glucose test is less than 2.6

mmol/L in the first 72 hours of life, but by 72 hours of age should be greater than 3.3 mmol/L.

What temperature is too low for a baby? Your baby's temperature may range from 96.8°F (36°C) to 100.3°F (37.9°C) and still be in a healthy range. Contact your pediatrician if it drops below 95°F (35°C). That's a condition called hypothermia and needs treatment.

What is the head cooling protocol for neonates? SHC requires a head cap that circulates cold water to decrease the core temperature of the neonate. The head and brain structures reach a cooler temperature than the body. The target temperature in SHC is 34 to 35 °C. Remove the cooling cap every 12 hours to look for an irritative scalp injury due to the cap.

Why do they cool babies in the NICU? Therapeutic hypothermia, also called whole body cooling, is a medical treatment for newborns who are under 6 hours old who have experienced a lack of oxygen or blood flow (hypoxic-ischemic encephalopathy, or HIE) to the brain and other organs before or during labor and delivery.

Where to insert a chest tube? Placement: A thoracostomy tube is usually placed between the mid to anterior axillary line in the fourth or fifth intercostal space, tracking above the rib so as not to injure the intercostal bundle (artery, vein, nerve). The fourth intercostal space is normally at nipple level on males or inframammary fold on females.

What is hyperresonance? noun. hy·per·res·o·nance -?rez-?n-?n(t)s, -?rez-n?n(t)s. : an exaggerated chest resonance heard in various abnormal pulmonary conditions.

What is a clasp lung? Definition. A collapsed lung occurs when air escapes from the lung. The air then fills the space outside of the lung between the lung and chest wall. This buildup of air puts pressure on the lung, so it cannot expand as much as it normally does when you take a breath. The medical name of this condition is pneumothorax.

What are the initial presenting signs of a patient with a pneumothorax? Some patients may be asymptomatic, and pneumothorax is diagnosed as an incidental

finding during the workup for another condition. The most common presenting symptoms are chest pain and shortness of breath (64 to 85%). Chest pain is usually severe, sharp/stabbing, pleuritic and radiates to ipsilateral shoulder/arm.

How do you identify a pneumothorax? A pneumothorax is generally diagnosed using a chest X-ray. In some cases, a computerized tomography (CT) scan may be needed to provide more-detailed images.

Which of these signs would indicate the presence of a pneumothorax? The most common symptoms are chest pain and shortness of breath. The chest pain is pleuritic, sharp, severe, and radiates to the ipsilateral shoulder. In SSP, dyspnea is more potent because of decreased underlying lung reserve.

What are the clinical signs of neonatal pneumothorax?

Which of these signs would indicate the presence of a pneumothorax? The most common symptoms are chest pain and shortness of breath. The chest pain is pleuritic, sharp, severe, and radiates to the ipsilateral shoulder. In SSP, dyspnea is more potent because of decreased underlying lung reserve.

What are the signs and symptoms of a pneumothorax EMT? The most common symptoms of this condition are acute, unilateral chest pain and shortness of breath. Pneumothorax can affect all age groups. Thus, EMS providers should maintain a high index of suspicion for this condition for any patient with sudden-onset unilateral chest pain and respiratory distress.

What is an early indicator of pneumothorax? The main symptoms of a pneumothorax are sudden chest pain and shortness of breath. Severity of symptoms may depend on how much of the lung is collapsed.

How do you write a sales SOP?

What are the 5 parts of SOP? In general, administrative/programmatic SOPs will consist of five elements: Title page, Table of Contents, Purpose, Procedures, Quality Assurance/Quality Control, and References.

It includes everything from initial prospecting strategies, to how employees should contact customers, follow up with them, and even pass them onto the customer success team.

How should a SOP be formatted?

What are the five standard operating procedures?

The Moon: A Feminine Symbol in Poetry

Question 1: How does "The Moon is Always Female" by Marge Piercy explore the femininity of the moon?

Answer: Piercy's poem depicts the moon as a powerful, alluring, and often mysterious entity. She uses female pronouns and imagery, such as "she," "mistress," and "maiden," to convey a sense of its feminine nature.

Question 2: What does the moon represent in Piercy's poem?

Answer: The moon embodies various aspects of the feminine experience, including cyclical change, fertility, and intuition. It also represents the interconnectedness of women and nature.

Question 3: How does the poem describe the moon's influence on women?

Answer: Piercy suggests that the moon influences women's bodies, emotions, and spirituality. She writes of the moon's "pull" on women's bodies and its power to evoke feelings of love, longing, and self-discovery.

Question 4: What is the significance of the moon's changing phases in the poem?

Answer: The moon's phases symbolize the cyclic nature of women's lives and the different roles they play throughout their existence. The new moon represents new beginnings, while the full moon represents maturity and power. The waxing and waning phases reflect women's hormonal cycles and emotional fluctuations.

Question 5: How does the poem end, and what does this suggest about the moon's enduring presence?

Answer: The poem ends with the image of the moon as an "old crone," which represents both the wisdom of age and the cyclical nature of life and death. This suggests that the moon will always be there, guiding and inspiring women throughout history.

How many gazetted holidays are there in India? There are 17 gazetted holidays in India in 2024.

How many national public holidays are there in India? There are only three national holidays declared by Government of India: Republic Day (26 January), Independence Day (15 August), and Gandhi Jayanti (2 October).
