**What are two ways that the company has increased productivity in home style cookies?** The diagonal-cut cookies require less space than straight-cut cookies, and the result is a higher level of productivity. In addition, the company recently increased the length of each oven by 25 feet, which also increased the rate of production.

**Why did increasing the length of the oven result in a faster output rate?** Increasing the length of the ovens resulted in a higher production rate since it enables more cookies to be baked at once. The bigger the oven, the more cookies are baked in it which means the faster the output of cookies.

**Is a home cookie business profitable?** For example, if you can make a batch of cookies using simple ingredients, like sugar, oil, water, flour and chocolate chips, you may be able to sell each cookie for around \$2 for a profit. It may cost you between \$.50 and \$1.00 to make each cookie, but you'll see around a 100% profit at that rate.

**What are two advantages of eating homemade cookies instead of purchased cookies?** Homemade chocolate chip cookies are generally healthier than store-bought cookies because they don't contain added chemicals and preservatives. If you are making your own cookies at home, you also have control over the quality of the ingredients you're using.

**When the oven temperature is too high does it increase or decrease the spread of your cookie?** Thicker cookies with less spread Because the cookies set sooner as oven temperature increased, they also had less time to spread and flatten. Although the cookies all started out as 57-gram spheres, the 375°F cookies are

noticeably thicker and smaller than the 325°F ones.

**What is the rapid rise in the oven due to the production and expansion of trapped gases because of the oven's heat?** Oven spring is the rapid rise in the oven due to the production and expansion of trapped gases as a result of the oven's heat. The yeast is very active at first, but stops acting when the temperature reaches 140°F. Then, coagulation of proteins and gelatinization of starches occurs, so the dough holds its shape.

**What is the richest cookie company?** Mondelez International topped the list of cookie vendors with retail sales amounting to roughly 2.97 billion U.S. dollars for the 52 sales weeks ended January 24, 2016.

**What is the best selling cookie in the world?** Oreo is the best-selling cookie in the world. It is now sold in over 100 countries. Oreo was first produced in 1912 by the National Biscuit Company, now known as Nabisco. But did you know Oreos are a copycat product?

**What makes a cookie rich?** Melting butter incorporates no air, leading to denser cookie. If you brown your butter (cook the butter until the milk solids brown and it gives off a rich, nutty aroma), this causes the water content of the butter to evaporate, lending no extra moisture to the dough, yielding a very dense, but richly flavoured cookie.

**Are homemade cookies junk food?** The health issue for homemade cookies is that they're generally made with refined white flour, butter, and sugar. That's the recipe for shortbread, and the basis for almost all cookies. None of those three ingredients provides any nutritional value.

**What do cookies do to your body?** Cookies that are kind to our liver Consuming too much refined sugar and saturated fat can alter the functioning of the immune system, which in turn influences the absorption, accumulation and use of fats in the body.

**Why is cookie dough better than the actual cookie?** One of the most significant advantages of raw cookie dough is the ability to customize the end result. You can add your favourite mix-ins, such as chocolate chips, nuts, or even candy pieces, to

create a personalized, delicious experience.

**How do cookies improve performance?** Cookies do lots of different things, like letting you navigate between pages efficiently, storing your preferences, and generally improving your experience of a website. Cookies make the interaction between you and the website faster and easier.

**What are the advantages to a business of using cookies?** The single most important job of a cookie is to keep a user logged in as they browse from page to page. A user's browsing history becomes part of a database which the website then uses to improve the customer experience.

**Why are homemade cookies better than store bought?** The Homemade Advantage: When baking at home, you have the power to select high-quality, wholesome ingredients, steering clear of artificial additives, excessive sugar, and preservatives commonly found in store-bought options. Flour, the cornerstone of most baked goods, can be a prime example.

**What are the two main reasons that websites use cookies?**
