Word Problems Solutions: A Step-by-Step Guide to Success

Word problems are mathematical puzzles that require students to apply their knowledge of arithmetic and problem-solving skills to real-world situations. Often, the problems are presented in written form, requiring careful reading and analysis. Here's a step-by-step guide to help you solve word problems effectively:

1. Read the Problem Carefully

Read the problem thoroughly to understand the context and identify the key elements. Determine what information is given and what you need to find. Mark or highlight important details and key terms.

2. Identify the Operation

Determine the mathematical operation or operations needed to solve the problem. This could be addition, subtraction, multiplication, division, or a combination thereof.

3. Translate into an Equation

Based on the problem and the identified operation, translate the information into a mathematical equation. Use variables or symbols to represent unknown values. For example, if the problem involves finding the total cost of items, you could use the

variable "x" to represent the total cost.

4. Solve the Equation

Use your algebraic or arithmetic skills to solve the equation for the unknown variable. Perform the calculations carefully, checking your work to ensure accuracy.

5. Check Your Solution

Once you have solved the equation, check your solution by plugging it back into the original problem. Make sure the solution makes sense and satisfies all the conditions of the problem.

Example:

Question: A farmer has 120 sheep and sells 50 of them. He then buys 100 more sheep. How many sheep does he have now?

Answer:

1. **Read the problem:** The farmer starts with 120 sheep, sells 50, and buys 100 more.
2. **Identify the operation:** We need to find the total number of sheep after the transactions, which involves addition and subtraction.
3. **Translate into an equation:** Let "x" be the total number of sheep now. We can write the equation: $x = 120 - 50 + 100$
4. **Solve the equation:** Simplifying the equation, we get: $x = 170$
5. **Check the solution:** Plugging $x = 170$ back into the problem, we can verify that the farmer now has 170 sheep.

Chapter 246: "Departure from Camelot"

Question 1: What happens at the beginning of the chapter?

- The chapter opens with a meeting between the Seven Deadly Sins, Meliodas, and the Fairy King, King. King informs the Sins that they must leave Camelot to protect both the kingdom and themselves from an

unknown threat.

Question 2: What is the threat that the Sins face?

- The threat is not fully revealed in this chapter, but King mentions that it is a "terrible evil" that is approaching. He also warns that it will be stronger than anything the Sins have faced before.

Question 3: How do the Sins react to the news?

- The Sins are shocked and concerned, but they agree to leave Camelot. They believe that it is their duty to protect the kingdom, even if it means putting themselves in danger.

Question 4: Where do the Sins go after they leave Camelot?

- The Sins travel to the Fairy King's Forest, where they plan to hide and prepare for whatever threat may come.

Question 5: What is the significance of the chapter's title?

- The title, "Departure from Camelot," symbolizes the Sins' decision to leave the safety and comfort of the kingdom and face the unknown dangers that await them. It also foreshadows the upcoming conflict that will test the limits of their abilities and their bonds as a group.
