Why is animal dissection good? Dissection is also important because it: Helps students learn about the internal structures of animals. Helps students learn how the tissues and organs are interrelated. Gives students an appreciation of the complexity

of organisms in a hands-on learning environment.

What is the main purpose of dissection? Plant and animal bodies are dissected to analyze the structure and function of its components. Dissection is practised by students in courses of biology, botany, zoology, and veterinary science, and sometimes in arts studies. In medical schools, students dissect human cadavers to learn anatomy.

What body parts do rabbits use for survival? Rabbits have special body features to help them survive in the wild. They have sharp long claws, which help them dig their burrows for protection. Their long ears are not only cute, but they provide sensitive hearing which can help them locate predators.

How long do dissection specimens last? Please understand that all specimens, though preserved, eventually dry out. Specimens used within one year will have the best outcomes. Occasionally, a specimen will appear normal, but the internal tissue is not fully preserved. These specimens can decompose over time and become unusable.

What do they soak dissection animals in? Preservatives. Preservatives prevent mold and bacterial growth on and in dissection specimens while maintaining tissue consistency similar to that of the living organism. Specimens are rinsed and packaged in non-toxic solutions such as a 2% propylene glycol and 98% water solution with less than 0.6% formalin.
