**What is the diamond water controversy?** Diamond Water Paradox: Marginal Utility vs. Clearly, water is more valuable as an essential resource as opposed to the luxury of owning a diamond. As demand increases as well, consumers must choose between one additional diamond versus one additional unit of water. This principle is known as marginal utility.

**What is the controversy with Crystal Light?** Another red flag ingredient in crystal light is acesulfame potassium, which is about 200 times sweeter than table sugar but often used for sour flavor. Often referred to as Ace-K, this ingredient may not be as safe as originally thought.

**Does Crystal Geyser still erupt?** The geyser is said to erupt at least once every day but there isn't a pattern or timeline to go by. What we have read on Wikipedia is that when enough CO<sub>2</sub> dissolves in the aquifer below the pressure sends the water skyward.

### **How do you start a charcoal drawing?**

### **How do you turn a picture into a charcoal drawing?**

### **How do you draw with charcoal pencils for kids?**

**What makes a good charcoal drawing?** Such works often feature textural effects, scraping, the mixing of water or other liquids with charcoal powder, stumping, and various reductive techniques such as erasing. The medium is prized for its ability to produce an interplay between light and shadow known as chiaroscuro.

**Do you draw dark or light first in charcoal?** Rather than creating the scale in order, she advises her students to fill in the blackest black first, but to then jump to the center of the scale, creating a medium or middle gray there. Then, students can slowly work from the center outwards, towards black and white.

**What are the 3 basic types of drawing charcoal?** There are three main kinds of charcoal: powdered, compressed, and willow or vine. Powdered charcoal is the most basic type because it is an ingredient in compressed charcoal. Powdered charcoal is well suited to 'toning' large areas of a surface, but can also be very messy.

### **How do you draw charcoal without a mess?**

**Is charcoal drawing same as pencil drawing?** Graphite pencils provide a cleaner, more predictable line and are less messy compared to charcoal. They allow for

detailed work and subtle shading, making them ideal for intricate drawings. Charcoal, on the other hand, is favored for its expressive quality and rich, deep blacks.

**Is drawing paper good for charcoal?** The charcoal will not 'grab' to the paper as easily as with rougher paper, but that also means that it's very well suited for working with erasers. An example of smooth drawing paper that works well with charcoal, is Bristol paper. Personally I also love to use charcoal on watercolor paper.

**How to make a human face?**

**How to shade with a charcoal pencil for beginners?**

**How messy is charcoal drawing?** Can working with charcoal get messy? Eh... well, the answer is: yes! Your hands can get quite dirty, and your work area might get covered in charcoal dust as well. But it's actually quite easy to prevent the mess.

**How to start a charcoal drawing?**

**What is the best charcoal for portraits?** Nitram is medium-soft charcoal artists prefer while sketching and drawing portraits. The unique manufacturing technique of nitram makes it superior and more durable than any other form of charcoal.

**What are the 4 most common accessories used in charcoal artworks?**

**How to turn a photo into a charcoal drawing?**

**Why is it hard to draw with charcoal?** It also has an incredible soft powdery texture that brings a lot of depth to a work if one knows how to control it... And here comes the tricky part! Charcoal is basically powder and uncontrollable in essence: it is hard to sharpen, it breaks all the time, it is extremely volatile and it stains everything...

**What is the best way to frame a charcoal drawing?** The ideal method is to use T-Hinges, V-hinges or acid-free photo corners attached to the backing board rather than the mount board. By connecting the drawing to the backing board using hinging or photo corners, you'll ensure there's minimal movement and with that, minimal dust falling from the paper.

**Is charcoal hard for beginners?** Charcoal is one of my favorite mediums for beginners to art to start with. It's fast, it's forgiving of mistakes, and it helps you to perfect your values!

**What is the best thing to draw in charcoal?**

**Are pastels the same as charcoal?** Pastels are a versatile medium that can be used to create a range of effects, from delicate and subtle shading to bold and dramatic strokes. Charcoal, on the other hand, is known for its rich black colour and ability to create deep, dark lines.

**Can I use hairspray on charcoal drawings?** You shouldn't use hairspray to fix drawings. It is likely to yellow over time, often quickly. It may also change the appearance of your work, making it appear darker or even dissolving some colours completely. You should seal your drawings with an artist quality fixative spray instead.

**How to draw fur with charcoal?**

**How to use a charcoal pencil for portrait?**

**How do you start charcoal easily?**

**How do you prepare charcoal sticks for drawing?** Pack them tightly into the tin and tie with wire if the lid is not secure. Make a fire - put your tin in your fire or next to your burning logs. As your mini tin kiln heats up, a flame will come out of the holes - this is the wood gases burning. Once the flame disappears, the wood has become charcoal.

**Is charcoal hard for beginners?** Charcoal is one of my favorite mediums for beginners to art to start with. It's fast, it's forgiving of mistakes, and it helps you to perfect your values!

**How to sharpen a charcoal pencil?**

**How do you make charcoal step by step?**

**Can charcoal go bad?** Lump charcoal can last just about forever as long as you keep it dry. Briquette is another story. It is made of binder such as starch and absorbs moisture much easier than lump charcoal. Self-igniting charcoal has a year or two shelf life before the igniting chemicals evaporate.

**Why won't my charcoal stay lit?** The function of your charcoal grill is relatively simple. It relies on constant airflow to feed the charcoal and keep it lit, whether you're using briquettes or hardwood lump charcoal. A charcoal grill that isn't staying lit is likely not getting enough airflow from the underside of the grill.

**Where do I start drawing charcoal?**

**Do you need special paper for charcoal drawing?** The charcoal will not 'grab' to the paper as easily as with rougher paper, but that also means that it's very well suited for working with erasers. An example of smooth drawing paper that works well with charcoal, is Bristol paper. Personally I also love to use charcoal on watercolor paper.

**Is it easier to draw with pencil or charcoal?** Charcoal is preferred for outdoor drawing due to its ease of use, versatility, and ability to create bold, expressive lines. It can be smudged and blended more effectively than pencils, allowing artists to capture quick sketches and varying textures in natural environments.

**How to shade a charcoal drawing?**

**What is the difference between a charcoal pencil and a HB pencil?** A charcoal pencil contains compressed charcoal and is much softer and darker than an HB pencil. It is used primarily for expressive drawing and shading, while HB pencils are versatile tools suitable for writing, sketching, and technical drawing.

**Can you watercolor over charcoal?** Adding watercolor to a charcoal drawing can be done without fixative, if you follow a few caveats. If the charcoal is gently buffed into the paper with a blending stump, or a twist of paper towel, the powdery particles affix themselves more securely to the paper's surface.

**Why do my charcoal pencils break when I sharpen them?** Because of their fragile nature, it's best to not sharpen your charcoal pencils with a regular sharpener.

We'd recommend using a sharp hobby knife and begin by sharpening away from yourself, slowly and at a slight angle.

**Can you wet charcoal pencils?** Painting with wet charcoal is considered an advanced technique, but it can be fun for beginner experimentation. It's important to use a watercolor paper or one that can take gesso. I use a watercolor paper with fine tooth. If the paper isn't in a block, it should be stretched before beginning.

**How do you make a charcoal pencil smooth?** Sometimes the eraser is the right tool. A kneadable eraser works best. That said, I think it is faster to gradually add more pencil/charcoal than it is to go too dark, having to lighten the tone with an eraser, and then correct/clean the area again.

**What is  $n$  in financial maths?** For calculations using the simple interest formula, we solve for  $n$ , the time period of an investment or loan, by simply rearranging the formula to make  $n$  the subject. For compound interest calculations, where  $n$  is an exponent in the formula, we need to use our knowledge of logarithms to determine the value of  $n$ .

**What is half yearly in financial maths?** ? half-yearly(semi-annually): twice per year (every six months) ? quarterly: four times per year (every three months) ? monthly: twelve times per year (every one month) ? daily: 365 times per year (excluding leap years)

**What is simple and compound interest grade 11 notes?** Simple interest is interest earned on the principal invested amount only, whereas compound interest is interest earned on the principal amount plus interest on the interest already earned.

**What is the summary of financial mathematics?** Financial mathematics focuses on applying mathematical formulas and equations to financial problems, market modeling and data analysis. With this strategy, financial professionals can better understand business performance, including profitability and growth potential.

**What is  $J$  in financial math?**  $j$  = nominal annual rate of interest.

**What is  $N$  and  $Z$  in math?** List of Mathematical Symbols. •  $R$  = real numbers,  $Z$  = integers,  $N$ =natural numbers,  $Q$  = rational numbers,  $P$  = irrational numbers.

**What is j in compound interest?** The nominal interest rate ( $j$ ) is the quoted or stated interest rate annually. It is the rate, expressed as a percent, that precedes the word “compounded”. For example, if the interest rate is 5% compounded quarterly, the nominal interest rate is 5%.

**What is the formula for CP interest?** The compound interest is found using the formula:  $CI = P(1 + r/n)^{nt} - P$ . In this formula,  $P(1 + r/n)^{nt}$  represents the compounded amount. the initial investment  $P$  should be subtracted from the compounded amount to get the compound interest.

**Is half yearly 2 or 6?**

**What is n in compound interest?** Compound Interest Formula  $P$  = principal.  $r$  = rate of interest.  $n$  = number of times interest is compounded per year.

**What is the difference between SI and CI formula?** The fundamental difference between simple interest and compound interest is that S.I. is calculated on the principal amount however C.I. calculation involves the principal amount + the interest that is collected on the principal amount every year.

**What is the difference between compounding and discounting?** Both compounding and discounting consider the time value of money but in different ways. Compounding emphasizes the future value of money by accounting for the growth of investments over time. On the other hand, discounting focuses on the present value of money by considering the current worth of future cash flows.

**Is financial math hard?** One thing that's for sure is the high amount of math you will need to study. Finance is a mathematical discipline, so if you aren't as comfortable with math as with other ways of thinking, you may find it more challenging. Additionally, finance also makes use of a vast, highly specific vocabulary.

**What is the formula for financial maths?** So the future value  $F$  after  $n$  years is the original amount plus the interest earned. That is,  $F = P + nrP = 1 \#P + nrP = (1 + nr)P$ . Future Value Formula for Simple Interest The future value  $F$  after  $n$  years is  $F = (1 + nr)P$ , where  $r$  is the interest rate per year and  $P$  is the principal (or present value).

**What math is used in financial mathematics?** Financial Mathematics is the field of applied mathematics that involves defining problems in finance and providing solutions using methods that draw from probability, statistics, differential equations, optimization, numerical methods, and data science.

**What is  $v$  in financial math?**

**What does  $p$  mean in financial maths?** The opening balance in financial calculations is often called the principal, denoted as  $P$  (R1 000 in the example). The interest rate is usually labelled  $i$  (5% p.a. in the example and “p.a.” means per annum or per year).

**What is  $E$  in finance math?**  $E$  is a series of numbers that begin with 2.71828. Just like  $\pi$ , it is non-terminating, which means it goes on and on. It is also an irrational number, which means it can't be expressed as a fraction. You can use it to calculate the decay or growth of a particular factor over time, such as compound interest.

**What does  $X \in R$  mean?** It is a symbol that essentially means “includes” or “element of” For example, if you are given an ordered pair written as  $(x, y)$  element of  $R^2$ , this means that the pair  $(x, y)$  can exist anywhere in 2D space. For your specific problem:  $X, Y \in R$  means that both  $x$  and  $y$  could be any real number.

**What is this  $\sqrt{\quad}$  Radical -** The  $\sqrt{\quad}$  symbol that is used to denote square root or  $n$ th roots.

**What does  $Q$  stand for in math?** The letter  $(Q)$  is the symbol that is used to represent rational numbers. Rational numbers are sometimes called fractions. They are numbers that can be written as the quotient of two integers. They have decimal representations that either terminate or do not terminate but contain a repeating block of digits.

**How to find  $r$  in fv formula?** FV of an annuity, if the payments are made at the end of the period (i.e., end of the month or year) is calculated as  $FV = PMT \times [(1+r)^n - 1]/r$ , where  $FV$  = future value of an annuity stream,  $PMT$  = dollar amount of each annuity payment,  $r$  = the discount (interest) rate, and  $n$  = number of periods in which payments will ...

**How to calculate fv?** The future value formula is  $FV = PV(1+r)^n$ , where PV is the present value of the investment, r is the annual interest rate, and n is the number of years the money is invested. The Excel function FV can be used when there is a constant interest rate.

**What is m in compound interest?** m is the number of compounding periods (months in our example) r is the annual interest rate. k is the number of compounds per year.

**How to calculate APR?**  $APR = (((Interest\ charges + fees) \div Loan\ amount) \div Number\ of\ days\ in\ loan\ term \times 365) \times 100$ . This formula is a lot to digest and can help you understand how APR is calculated. Fortunately, the Truth in Lending Act requires lenders to disclose APR when they offer you credit.

**What is the formula for profit and loss?** This derives the formula: Profit = Selling price - Cost Price. However, if the cost price of a product is more than its selling price, there is a loss is incurred in the transaction. This derives the formula: Loss = Cost Price - Selling Price.

**What is the formula for pert?** This can be measured by minutes, hours, days, or even weeks. For example, if the optimistic time is 30 minutes, the pessimistic time is 60 minutes, and the most likely time is 45 minutes, the PERT formula would be:  $(30min + (4 \times 45min) + 60min) \div 6 = 45\ minutes$ .

**What is the N in finance?** If we know the present value (PV), the future value (FV), and the interest rate per period of compounding (i), the future value factors allow us to calculate the unknown number of time periods of compound interest (n).

**What does N stand for in math?** The letter (N) is the symbol used to represent natural numbers. Natural numbers are also known as counting numbers, and they begin with the number 1 and continue to infinity (never ending), which is represented by three dots (...). The natural or counting numbers (N): 1, 2, 3, 4 . . . "and so on." Whole Numbers.

**What does N stand for in finance equations?**  $FV = PV(1 + i/n)^{n \times t}$  where: FV = Future value of money PV = Present value of money i = Interest rate n = Number of compounding periods per year t = Number of years

$$FV = PV \Big( 1 + \frac{i}{n} \Big)^{n \times t}$$
  
BOTTLED WATER REPORT 2017 CRYSTAL GEYSER WATER COMPANY

$(1 + \frac{i}{n})^n$  where:  $FV = \text{Future value of money}$   $PV = \text{Present ...}$

**What does N mean in a financial calculator?** Number of Periods (N) This is the number of periods in the calculation. Make sure this is the number of payments if you are calculating loan values. For example, a 10 year loan with monthly payments has 120 periods.

**How to calculate NPV?**

**How to calculate FV?** The future value formula is  $FV = PV(1+r)^n$ , where PV is the present value of the investment, r is the annual interest rate, and n is the number of years the money is invested. The Excel function FV can be used when there is a constant interest rate.

**What is N in PMT formula?** The arguments (variables) for the function are similar to the compound interest function. PV = Present value or amount of the loan (just one variable) r = Annual rate. t = Number of years. n = Number of compoundings (sometimes the same as the number of payments) each year.

**How to find the value of n in math?**

**What is this ??** Radical - The  $\sqrt{\quad}$  symbol that is used to denote square root or nth roots.

**What does  $\sqrt{n}$  mean?** The square root n means the square root of the sample size. The most common use of the term square root n is in the calculation of the standard error of the mean. The standard error is a key term in the equation for the margin of error in the confidence interval. The equation for margin of error is:  $E = Z \frac{\sigma}{\sqrt{n}}$ .

**What does PV mean in financial math?** The present value formula consists of the present value and future value related to compound interest. The present value or PV is the initial amount (the amount invested, the amount lent, the amount borrowed, etc). The future value or FV is the final amount. i.e.,  $FV = PV + \text{interest}$ .

**What is PMT in math?** "PMT" stands for "payment", hence the function's name. For example, if you are applying for a two-year car loan with an annual interest rate of

7% and the loan amount of \$30,000, a PMT formula can tell you what your monthly payments will be.

**What are finance formulas?** What are finance formulas? Finance formulas are principles, facts or rules that you can express using maths symbols to represent financial concepts. They usually have an equal sign and two or more variables. Knowing the value of one quantity can help you apply the formula to determine the value of an unknown quantity.

**What does N represent in financial math?** N=Number of compoundings. I%= annual interest rate. PV= present value. PMT= payment. FV= future value.

**Is PMT always negative?** Your regular payment, (pmt). Financial calculators usually require that a payment you make is negative, but to me a negative "payment" should mean you get money. Thus pmt is positive when you pay off a loan, and it's negative when you draw money out of an account.

**What does N mean finance?** PV: Present value of money, also explained further on. i: Interest rate or the discount rate, which is a risk-free rate of return or an inflation rate. n: Number of compounding periods of interest per year.

## **The Anthony Roll of Henry VIII's Navy: Questions and Answers**

**1. What is the Anthony Roll?** The Anthony Roll is a manuscript roll from the 16th century that depicts all the ships of Henry VIII's navy in 1546, shortly after the flagship, the Mary Rose, sank.

**2. What does it contain?** The roll shows the size and armament of each ship, as well as the names of their captains. It also includes a map of the dockyards where the ships were built and repaired.

**3. Where is it kept?** The original Anthony Roll is held at the Pepys Library at Magdalene College, Cambridge, as MS 2991. A copy can be found at the British Library, as Additional MS 22047.

**4. What are some related documents?** There are several related documents that provide additional information about Henry VIII's navy. These include the "Survey of the King's Ships" (1546), the "Inventory of Naval Ordnance" (1547), and the

"Harleian Manuscript 1630" (16th century).

**5. Why is it significant?** The Anthony Roll is a valuable source of information about Henry VIII's navy. It provides a detailed snapshot of the size and composition of the fleet, which was a major part of England's defense system.
