## **Zumdahl Chemistry 7th Edition: Questions and Answers**

### **1. What is the ideal gas law?**

The ideal gas law is an equation that relates the pressure, volume, temperature, and number of moles of a gas. It is important in many areas of chemistry, including gas stoichiometry, thermochemistry, and chemical kinetics. The ideal gas law is given by:  $PV = nRT$  where  $P$  is the pressure,  $V$  is the volume,  $n$  is the number of moles,  $R$  is the ideal gas constant, and  $T$  is the temperature.

### **2. What is the difference between an atom and an ion?**

An atom is the smallest unit of matter that retains the properties of an element. It consists of a nucleus, which contains protons and neutrons, and electrons, which orbit the nucleus. An ion is an atom that has gained or lost one or more electrons, giving it a net electrical charge. Ions are formed when atoms interact with each other or with other substances.

### **3. What is the pH of a solution?**

The pH of a solution is a measure of its acidity or basicity. It is defined as the negative logarithm of the molar concentration of hydrogen ions ( $H^+$ ) in the solution:  $pH = -\log[H^+]$ . A pH of 7 is neutral, while a pH below 7 is acidic and a pH above 7 is basic. The pH scale ranges from 0 to 14.

#### 4. What is a chemical reaction?

A chemical reaction is a process in which atoms or ions are rearranged to form new substances. Chemical reactions are represented by chemical equations, which show the reactants on the left side of the equation and the products on the right side. Chemical equations must be balanced to ensure that the number of atoms of each element is the same on both sides.

#### 5. What is thermodynamics?

Thermodynamics is the study of energy and its relation to matter. It is concerned with the changes in energy that occur during chemical reactions and physical processes. The laws of thermodynamics are based on the conservation of energy, which states that energy cannot be created or destroyed, only transferred or transformed from one form to another.
