Stoichiometry and Gravimetric Analysis Lab Answers

Paragraph 1: Stoichiometry:

- **Question:** Define stoichiometry.
- **Answer:** Stoichiometry is the study of the quantitative relationships between reactants and products in chemical reactions. It involves calculating the amount of reactants or products involved in a reaction based on the balanced chemical equation.

Paragraph 2: Gravimetric Analysis:

- **Question:** Describe the principle of gravimetric analysis.
- **Answer:** Gravimetric analysis is a technique used to determine the amount of a substance in a sample by isolating the substance in a solid form and measuring its mass. It involves converting the substance into a known, stable compound, which is then precipitated or evaporated to obtain a solid form.

Paragraph 3: Sample Calculations:

- **Question:** A sample of calcium carbonate (CaCO_3) weighing 0.500 g is heated to produce calcium oxide (CaO) and carbon dioxide (CO_2). What mass of calcium oxide (CaO) is produced if the reaction goes to completion?
- **Answer:** The balanced chemical equation for the reaction is $\text{CaCO}_3 \rightarrow \text{CaO} + \text{CO}_2$.
 - Molar mass of $\text{CaCO}_3 = 100.09 \text{ g/mol}$
 - Molar mass of $\text{CaO} = 56.08 \text{ g/mol}$
 - Moles of $\text{CaCO}_3 = 0.500 \text{ g} / 100.09 \text{ g/mol} = 0.00500 \text{ mol}$
 - Moles of CaO produced = 0.00500 mol
 - Mass of CaO produced = $56.08 \text{ g/mol} \times 0.00500 \text{ mol} = 0.2804 \text{ g}$

Paragraph 4: Experimental Error:

- **Question:** What are some sources of experimental error in gravimetric analysis?
- **Answer:** Sources of error include:
 - Inaccuracy of weighing equipment
 - Incomplete precipitation or evaporation
 - Contamination of the sample or precipitate
 - Buoyancy effects during weighing

Paragraph 5: Applications:

- **Question:** Provide examples of how stoichiometry and gravimetric analysis are used in real-world applications.
- **Answer:** Applications include:
 - Determining the purity of a substance
 - Analyzing the composition of ores and minerals
 - Controlling chemical reactions in industrial processes
 - Environmental monitoring and pollution control
