Section 5.6: Historical and Exponential Depreciation Read

Q1: What is historical depreciation? A: Historical depreciation refers to the gradual reduction in the value of an asset over its useful life, as determined by its

actual usage and condition. This method considers the asset's historical cost and the length of time it has been in service.

Q2: How does exponential depreciation differ from historical depreciation? A: Exponential depreciation allocates a larger portion of the asset's depreciation to the earlier years of its useful life. This method results in a more rapid decline in the asset's value compared to historical depreciation, which distributes depreciation more evenly over the asset's lifespan.

Q3: Which depreciation method is more widely used? A: Historical depreciation is the most commonly used method for financial reporting purposes. It is generally considered more accurate than exponential depreciation because it reflects the actual decline in the asset's value over time.

Q4: When might exponential depreciation be preferred over historical depreciation? A: Exponential depreciation may be preferred in situations where it is expected that an asset will experience a significant decline in value in the early years of its useful life. This method can also be beneficial for tax purposes, as it results in higher depreciation deductions in the early years.

Q5: What are the key advantages and disadvantages of both depreciation methods? A: **Historical depreciation:**

- Advantages: More accurate reflection of asset value, simple to understand and calculate.
- Disadvantages: Lower depreciation deductions in early years.

Exponential depreciation:

- Advantages: Higher depreciation deductions in early years, can be used to accelerate asset write-offs for tax purposes.
- Disadvantages: Less accurate reflection of asset value, potentially more complex calculations.
