Social Psychology (9th Edition) by Kassin Exam: Questions and Answers

Question 1: What is the definition of social psychology? **Answer:** Social psychology is the scientific study of how people's thoughts, feelings, beliefs, and behaviors are influenced by the actual, imagined, or implied presence of others.

Question 2: Describe the fundamental attribution error. **Answer:** The fundamental attribution error occurs when people overestimate the influence of internal factors (e.g., personality) in explaining others' behavior and underestimate the influence of external factors (e.g., situational constraints).

Question 3: Explain the concept of social facilitation and social inhibition. **Answer:** Social facilitation refers to the improved performance of people on certain tasks when others are present. Conversely, social inhibition occurs when the presence of others impairs performance. The presence or absence of social facilitation/inhibition depends on factors such as task difficulty and the person's motivation.

Question 4: What is the relationship between attitudes and behavior? **Answer:** Attitudes are generally predictive of behavior, but the relationship is often weak and indirect. Factors such as social norms, perceived costs and benefits of behavior, and cognitive dissonance can influence the extent to which people act in accordance with their attitudes.

Question 5: Discuss the role of culture in social psychology. **Answer:** Culture influences our values, beliefs, and behaviors. Cross-cultural research helps us understand the universality of psychological phenomena as well as the impact of different cultural contexts on human experience. Social psychologists study how culture affects processes such as perception, cognition, emotion, and interpersonal relationships.
