Understanding Parent-Infant Bonding: Assessment and Measurement\*\*

Parent-infant bonding is a crucial aspect of child development, shaping the emotional and social well-being of both parents and children. To assess this vital connection, researchers have developed various questionnaires and scales.

### **Parent-Infant Bonding Questionnaire (PIBQ)**

The PIBQ is a comprehensive questionnaire designed to measure the quality of parent-infant bonding. It evaluates various aspects, including:

- Attachment security
- Sensitivity and responsiveness
- Parental warmth and affection
- Infant's temperament and attachment behaviors

### **Mother-Infant Bonding Scale (MIBS)**

The MIBS questionnaire specifically focuses on assessing mother-infant bonding. It examines:

- Maternal attachment
- The infant's ability to regulate emotions
- The quality of mother-infant interactions

### **Parent Bonding Questionnaire (PBQ)**

The PBQ is used to measure the attachment between parents and children of all ages. It assesses two primary dimensions:

- Warmth and affection
- Rejection and control

### **Scoring Parent-Child Bonding Questionnaires**

The scoring of parent-child bonding questionnaires typically involves calculating subscale scores and then deriving an overall score. The specific scoring system varies depending on the questionnaire used.

### **Infant Behavior Questionnaire (IBQ)**

The IBQ is a questionnaire completed by parents to assess the behavior and temperament of their infants. It identifies aspects such as:

- Irritability
- Sociability
- Attention regulation

### **Global Rating Scale for Mother-Infant Interaction (GRSMII)**

The GRSMII is an instrument used to observe and evaluate the quality of mother-infant interactions. It considers:

- Maternal sensitivity
- Infant engagement
- The overall synchrony of the interaction

### **Parental Bonding Instrument (PBI)**

The PBI is a self-report questionnaire that measures an individual's perceptions of their relationship with their parents during childhood. It examines:

- Warmth and nurturance
- Authoritarian and controlling parenting

### **Baby Bonding Questionnaire (BBQ)**

The BBQ is a questionnaire used to assess the quality of bonding between infants and their adoptive parents. It focuses on:

- Attachment behavior
- Parental sensitivity
- The infant's response to parental interaction

### **Maternal Infant Bonding Scale (MIBS)**

The MIBS is a questionnaire designed to evaluate the quality of the mother-infant bond. It measures:

- Maternal attachment
- Infant emotional regulation
- The relationship between the mother and infant

### **Attachment Style Questionnaire (ASQ)**

The ASQ is a self-report questionnaire that assesses an individual's attachment style in adulthood. It identifies patterns such as:

- Secure attachment
- Avoidant attachment
- Ambivalent attachment

### **Parent-to-Infant Attachment Questionnaire (PAQ)**

The PAQ is a questionnaire used to evaluate the attachment between parents and their infants. It measures:

- Parental sensitivity
- Infant attachment behaviors
- The quality of the parent-infant relationship

Understanding the various parent-infant bonding questionnaires and scales enables clinicians and researchers to assess the quality of these crucial connections and provide appropriate interventions to support healthy child development.
