clogged fuel lines. You should also inspect the fuel intake system and ensure that there are no compression issues.

### **How to start STIHL 025 chainsaw?**

**Why did my STIHL chainsaw stop running?** The carburetor might be clogged. A clogged carburetor is often caused by leaving fuel in the chainsaw for a long period of time. Over time, some of the ingredients in the fuel may evaporate, leaving behind a thicker, stickier substance. This sticky fuel can clog up the carburetor and cause the chainsaw engine to stall.

**How much horsepower does a STIHL 025 chainsaw have?** Features. 45cc, 3 horsepower, 2.77 cu. in.

**What is the fuel mix for a STIHL 023?** We recommend a 50:1 mix ratio (20mls oil per 1 litre fuel) when using STIHL 2-Stroke oil.

**How do you fix a chainsaw that won't stay running?** A clogged air filter can be the reason why your chainsaw won't start or stay running. Find your chainsaw's air filter and remove it. If it's clogged or too dirty, wash it or replace it. Depending on your chainsaw's model it will have a washable or a conventional air filter.

**Why won't my chainsaw start after sitting?** A chainsaw's carburetor mixes air and fuel to start the internal combustion engine. If fuel has been left in the engine for too long, it can become sticky and clog the carburetor, preventing it from starting. If the clog is minor, clean out the carburetor.

**Why does my chainsaw have fuel and spark but won't start?** Inspect the Carburetor: A malfunctioning carburetor can prevent the proper mixture of air and fuel from reaching the engine. Remove the carburetor cover and inspect for any signs of blockages or damage. Cleaning or repairing the carburetor may be necessary to resolve starting problems.

**Why does my chainsaw run for a few minutes then dies?** The air filter may be clogged or dirty. If the air filter is clogged, the engine will get too much fuel and not enough air. As a result, the engine may stall or run roughly. Inspect the air filter to determine if it is clogged.

**What makes a chainsaw bog down?** Old or poor quality gasoline along with sawdust and dirt can plug the filter in the gas tank. If your saw isn't getting enough gas, remove and clean or replace the fuel filter.

**Why won't my chainsaw tick over?** Check the air filter for blockage. Check the carburettor settings are correct (including the idle adjustment). Check for spark. Check spark plug electrode for wear or carbon build up and correct gap.

455 Rancher is a popular choice by professional loggers. This chainsaw features low-kickback chains and an inertia safety chain break. It is a safe, powerful chainsaw, great for professional use.

**Why is my chainsaw idling but not running?** The first place to check would be the fuel filter, then check the fuel lines for cracks or pin holes. If everything checks out then you will need to disassemble the carburetor and rebuild it. Make sure that all the welch plugs are sealed and that the secondary screen filter is not plugged up also.
