What is Tkinter?

Tkinter is a Python library that is used to create user interfaces. It is cross-platform, meaning that it can be used to create GUIs on Windows, macOS, and Linux. Tkinter

is also relatively easy to learn, making it a good choice for beginners.

How do I use Tkinter?

To use Tkinter, you first need to import the library into your Python script. You can do this by adding the following line to the top of your script:

```
import tkinter as tk
```

Once you have imported the library, you can start creating your GUI. To create a window, you can use the `Tk()` function. This will create a new window with a title of "Tkinter Window".

```
root = tk.Tk()
```

You can then add widgets to your window. Widgets are the individual elements that make up a GUI, such as buttons, labels, and text boxes. To add a widget, you can use the `pack()` method. This method will add the widget to the window and arrange it according to the specified layout.

```
label = tk.Label(root, text="Hello, world!")  
label.pack()
```

Finally, you can run your GUI by calling the `mainloop()` method. This method will start the event loop, which is responsible for handling user input and updating the GUI.

```
root.mainloop()
```
