In an audacious bid for power the Cult of the Dragon, along with its dragon allies and the Red Wizards of Thay, seek to bring Tiamat from her prison in the Nine Hells to Faerun.

What do deep dragons hoard? Deep dragons valued and hoarded knowledge, and preferred to collect unique treasures with interesting backstories. They would meticulously organize their hoards, even framing or displaying their favorite pieces, and they delighted in giving long tours to guests, particularly other deep dragons.

What is a horde of dragons called? "Flock" and "herd" make them sound far too wimpy. I personally like "blaze" and "terror" A terror of dragons? "Thunder" would be fitting too; the word dragon came from the Chinese word for thunder, after all.

Is House Velaryon richer than Lannister? Historically, House Velaryon of Driftmark was at one point the richest house in Westeros, even richer than the Lannisters and Hightowers and commanded the largest fleet in all of Westeros. However much of this prowess was lost in the Dance of Dragons, Robert's Rebellion then again in the Battle of the Blackwater.

Why is there no Velaryon in Game of Thrones? House Velaryon is a prominent family in House of the Dragon, but fans might be wondering why they weren't in Game of Thrones or there was little to no mention of them in the original series. A quick answer to this is that the once-influential clan declined in power after the Targaryen civil war.

Where did Joffrey Velaryon go? He is relocated to Dragonstone, along with the rest of Rhaenyra's court.

What does the dragon hoard? They traditionally hoard piles of gold and jewels, treasures that they stole. This seems to be a natural part of dragon nature.

Satellite Meteorology: An Introduction

Satellite meteorology is the study of the Earth's atmosphere and weather using data from satellites. Satellites orbit the Earth at various altitudes, collecting data on a range of atmospheric parameters such as temperature, humidity, wind speed, and direction. This data is used to create weather maps, track weather systems, and forecast weather conditions.

Q: How do satellites collect data?

A: Satellites collect data using a variety of sensors, including visible light cameras, infrared sensors, and microwave sensors. Visible light cameras capture images of the Earth's surface, clouds, and weather systems. Infrared sensors measure the temperature of the Earth's surface and atmosphere. Microwave sensors measure the amount of water vapor and precipitation in the atmosphere.

Q: What are some of the applications of satellite meteorology?

A: Satellite meteorology has a wide range of applications, including:

- Weather forecasting: Satellites provide data that is used to create weather maps and forecasts.
- Climate monitoring: Satellites track changes in the Earth's atmosphere and climate over time.
- Disaster preparedness: Satellites monitor natural disasters such as hurricanes, floods, and earthquakes.
- Agricultural monitoring: Satellites monitor crop growth and soil conditions.
- Oceanography: Satellites monitor ocean currents, sea surface temperatures, and sea ice.

Q: What are some of the limitations of satellite meteorology?

A: Satellite meteorology has some limitations, including:

- Data latency: Satellite data can take several hours to reach the ground.
- Limited spatial resolution: Satellites cannot see features that are smaller than their pixel size.
- Cloud cover: Clouds can block satellites from seeing the Earth's surface and atmosphere.
- Cost: Satellites are expensive to build and launch.

Q: What are the future prospects for satellite meteorology?

A: The future prospects for satellite meteorology are bright. New satellites are being developed that will collect data with higher spatial and temporal resolution. These satellites will provide more accurate and timely weather forecasts and climate monitoring data.
