Student Exploration: Circuit Builder Gizmo Answer Key

Instructions: Use the Circuit Builder Gizmo to construct electric circuits and measure their properties. Answer the following questions based on your observations.

Question 1:

- How does the current (I) change as the voltage (V) is increased?
- Answer: The current increases as the voltage increases, in accordance with Ohm's law: $I = V/R$.

Question 2:

- What is the effect of adding resistors in series on the total resistance?
- Answer: Adding resistors in series increases the total resistance, making it more difficult for current to flow.

Question 3:

- Why does the power dissipated by a resistor increase as the current increases?
- Answer: The power dissipated (P) is calculated as $P = I^2R$. As the current increases, the power dissipated also increases.

Question 4:

- How can you use a voltmeter to measure the voltage across a resistor?

- Answer: Connect the voltmeter in parallel with the resistor, ensuring that the positive and negative terminals are correctly oriented.

Question 5:

- What is the difference between a closed circuit and an open circuit?
