**What is the formula for missing side?** The Pythagorean theorem states that  $a^2 + b^2 = c^2$  in a right triangle where  $c$  is the longest side. You can use this equation to figure out the length of one side if you have the lengths of the other two. The figure shows two right triangles that are each missing one side's measure.

**How do you find the missing side area?**

**How do you find the missing side of a figure?**

**How to use Pythagorean Theorem to find missing side?**

**What is the side side formula?** Therefore, the side angle side formula or the area of the triangle using the SAS formula  $= \frac{1}{2} \times a \times b \times \sin c$ . Let us work on some problems to understand the side angle side formula. Break down tough concepts through simple visuals.

**What is the formula for finding the missing side of a rectangle?** To find the missing side lengths, write an addition sentence for the perimeter of the rectangle. The perimeter of the rectangle is the sum of all its side lengths. Add the lengths of the sides you know. To find the missing lengths, subtract the lengths you know from the perimeter.

**How do you solve for an unknown side?**

**What is the formula of side of area?** Area of a square = Side  $\times$  Side =  $S^2$  Now, let us use this formula to find the area of a square of side 7 cm. We know that the area of a square = Side  $\times$  Side. Substituting the length of side as 7 cm,  $7 \times 7 = 49$ .

**How do you find the missing side of a special triangle?**

**How do you solve for an unknown side?**

**How do you find the missing side of an angle?** We might only know one side but we also know an angle. For example, if the side  $a = 15$  and the angle  $A = 41^\circ$ , we can use a sine and a tangent to find the hypotenuse and the other side. Since  $\sin A = a/c$ , we know  $c = a/\sin A = 15/\sin 41$ .

**How to calculate the 3rd side of a triangle?** Pythagoras theorem: In a right triangle, if hypotenuse, perpendicular and base are its sides, then as per the theorem, the square of hypotenuse side is equal to the sum of the square of base and square of perpendicular. Hence, if we know any two sides, then we can easily find the third side of the triangle.
