What are the learning outcomes of geometry Grade 4? In Year 4, your child will learn about acute and obtuse angles. They will also be introduced to coordinates and will be able to describe translations, and will build upon their knowledge of shape properties. The key words for this section are 2D, 3D, axis, coordinate, line of symmetry, symmetrical, and translate.

How hard is math in 4th grade? Even if your child has previously done well in math, the expectations are higher in fourth grade. They now have to multiply and divide with multi-digit numbers and have to work with and compare fractions. These can be hard for your child to grasp, especially if they were not doing very well before.

What level of math should a 4th grader know? In fourth grade, students focus most on using all four operations - addition, subtraction, multiplication, and division - to solve multi-step word problems involving multi-digit numbers. Fourth-grade math extends their understanding of fractions, including equal (equivalent) fractions and ordering fractions.
