### **How much payload can Falcon 9 carry?**

**What is the launch load of Falcon 9?** The heaviest payloads launched on Falcon are batches of 24 Starlink V2-Mini satellites weighing 17,500 kg (38,600 lb) total, a configuration first flown February 2024, landing on ASDS. The heaviest payload launched to geostationary transfer orbit (GTO) was the 9,200 kg (20,300 lb) Jupiter-3 on 29 July 2023.

**What is the payload of a launch vehicle?** Mass to orbit Launch vehicles are classed by NASA according to low Earth orbit payload capability: Small-lift launch vehicle: 2,000 kilograms (4,400 lb) - e.g. Vega. Medium-lift launch vehicle: 2,000 to 20,000 kilograms (4,400 to 44,100 lb) - e.g. Soyuz ST.

**How long is the payload fairing on Falcon 9?** Falcon 9 was described as capable of launching approximately 9,500 kilograms (20,900 lb) to low Earth orbit and was projected to be priced at US\$27 million per flight with a 3.7 m (12 ft) payload fairing and US\$35 million with a 5.2 m (17 ft) fairing.

**How much mass can Falcon Heavy carry?** Falcon Heavy has the first stages of three Falcon 9 launch vehicles joined together as its first stage and is designed to carry 53,000 kg (117,000 pounds) to orbit, nearly twice that of its largest competitor, the Boeing Company's Delta IV Heavy.

**What is the largest payload rocket?** The highest usable payload mass to Low Earth Orbit goes to the three-stage Saturn V SA-512 vehicle used for Apollo 17. Apollo Project: Exploring the Moon by Robert Godwin gives the mass placed in a

171.3 x 168.9km earth orbit as 311,151lb or 141,136kg.

**How much does 1 Falcon 9 launch cost?** The cost of launch for a Falcon 9 has been \$62 million historically, but it can carry considerably larger payloads up to 50,000 pounds. Per pound launch costs have been as low as \$1,200. SpaceX increased the cost of a launch to \$67 million in 2022, citing rising material costs and inflation.

**Why did Falcon 9 not launch?** The engine on the upper stage of a SpaceX Falcon 9 malfunctioned during a launch July 11, causing the potential loss of a batch of Starlink satellites and creating repercussions across the space industry.

**How many Falcon 9 launches in 2024?** The drone ship will be stationed in the Atlantic off of the Carolinas for this flight. Starlink 10-6 will be the 73rd Falcon 9 and 74th Falcon family launch of 2024 if the current schedule holds.

**How much cargo can SpaceX carry?**

**How much payload can Starship carry?** To better understand the scale - Starship is about the size of the half the Eiffel Tower and weighs about 3,000 tons. The planned payload capacity of the rocket is 150 tons (330k lb) in low-Earth orbit and can reach 250 tons (550k lb) if the stages are not returned to Earth.

**What is the maximum payload of the space shuttle?** The cargo/payload weighed up to 29,000 kg (65,000 pounds), depending on the desired orbital inclination.

**How much payload can rockets carry?** Heavy-lift launch vehicles generally are capable of lifting payloads between 20,000 to 50,000 kg (44,000 to 110,000 lb) (by NASA classification) or between 20,000 to 100,000 kilograms (44,000 to 220,000 lb) (by Russian classification) into low Earth orbit (LEO).

**What are the lines of evidence for evolution answer key?** What are the 4 lines of evidence for evolution? Fossil evidence, homologies, distribution in time and space, and evidence by example.

**What are the 5 key areas of evidence for evolution?** Evidence for evolution: anatomy, molecular biology, biogeography, fossils, & direct observation.

**What evidence supports evolution worksheet answers?** The study of fossils, embryology, biochemistry, and comparative anatomy provides evidence for evolution and evolutionary relationships between organisms.

**What evidence can be used to answer questions about evolution?** Molecular similarities provide evidence for the shared ancestry of life. DNA sequence comparisons can show how different species are related. Biogeography, the study of the geographical distribution of organisms, provides information about how and when species may have evolved.

**What are the 7 evidence of evolution?**

**What are the 3 lines of evidence for evolution?** SESSION 3: What Is the Evidence for Evolution? Darwin used multiple lines of evidence to support his theory of evolution by natural selection -- fossil evidence, biogeographical evidence, and anatomical evidence.

**What are the 5 main points of evolution?**

**What is a line of evidence?** Evidence drawn from one sort of test result that bears on the accuracy of an idea. In science, it is often desirable to use multiple lines of evidence (drawn from different sorts of tests and even different fields of study) to evaluate a scientific idea.

**What are the 4 main factors proving evolution?** The four propositions underlying Darwin's theory of evolution through natural selection are: (1) more individuals are produced than can survive; (2) there is therefore a struggle for existence; (3) individuals within a species show variation; and (4) offspring tend to inherit their parents' characters.

**What is evidence for evolution 4?** Fossils provide solid evidence that organisms from the past are not the same as those found today; fossils show a progression of evolution. Scientists determine the age of fossils and categorize them all over the world to determine when the organisms lived relative to each other.

**How is DNA used as evidence for evolution?** Answer and Explanation: DNA is used as evidence for evolution because it shows that all species have one common

ancestor. The more closely related the two species are, the more similar their DNA is, indicating they evolved from a recent common ancestor.

**What is the evidence of evolution summary?** In Summary: Evidence for Evolution Fossil evidence shows the changes in lineages over millions of years, such as in hominids and horses. Studying anatomy allows scientists to identify homologous structures across diverse groups of related organisms, such as leg bones.

**What are the 5 evidences of evolution explain?** Five types of evidence for evolution are discussed in this section: ancient organism remains, fossil layers, similarities among organisms alive today, similarities in DNA, and similarities of embryos.

**What is the strongest evidence of evolution?** Perhaps the most persuasive fossil evidence for evolution is the consistency of the sequence of fossils from early to recent. Nowhere on Earth do we find, for example, mammals in Devonian (the age of fishes) strata, or human fossils coexisting with dinosaur remains.

**Do Muslims believe in evolution?** Some Muslims around the world believe "humans and other living things have evolved over time", yet some others believe they have "always existed in present form". Some Muslims believe that the processes of life on Earth started from one single point of species with a mixture of water and a viscous clay-like substance.

**What are 4 types of evolution?** These different types of evolution include: divergent, coevolution, parallel evolution, and convergent evolution.

**Is evolution a theory or fact?** Evolution, in this context, is both a fact and a theory. It is an incontrovertible fact that organisms have changed, or evolved, during the history of life on Earth. And biologists have identified and investigated mechanisms that can explain the major patterns of change." Biologist T.

**What are the 5 rules of evolution?** Natural selection is a simple mechanism that causes populations of living things to change over time. In fact, it is so simple that it can be broken down into five basic steps, abbreviated here as VISTA: Variation, Inheritance, Selection, Time and Adaptation.

**What are the 6 types of evidence for evolution?** The evidence for descent with modification can usefully be grouped into six categories: 1) observed small changes; 2) biogeography; 3) comparative anatomy and evolutionary "vestiges"; 4) fossils; 5) classification; and 6) genetics.

**How do we know evolution is true?** Evidence and observation are the building blocks of all scientific inquiry; evolutionary science is no different. Evidence in the form of the fossil record, geological formations, and genetics attest to change having taken place and give clues to how evolution works.

**What are the three key points of evolution?**

**What are the 4 major lines of evidence that support evolution by natural selection?**

**What are the different lines of evidence for evolution which one is the strongest of them?** Darwin could compare only the anatomy and embryos of living things. Today, scientists can compare their DNA. Similar DNA sequences are the strongest evidence for evolution from a common ancestor.

**What are lines of evidence in science?** Evidence drawn from one sort of test result that bears on the accuracy of an idea. In science, it is often desirable to use multiple lines of evidence (drawn from different sorts of tests and even different fields of study) to evaluate a scientific idea.

**What is the evidence of evolution summary?** In Summary: Evidence for Evolution Fossil evidence shows the changes in lineages over millions of years, such as in hominids and horses. Studying anatomy allows scientists to identify homologous structures across diverse groups of related organisms, such as leg bones.
