Schaum's Outline of Principles of Accounting II: Questions and Answers

Question 1: Explain the concept of accrued expenses.

Answer: Accrued expenses are expenses that have been incurred but not yet paid for. For example, if a company receives a bill for utilities at the end of the month, the expense is considered accrued as of that date, even though the payment is not due until later.

Question 2: What is the difference between a debit and a credit in accounting?

Answer: A debit increases an asset or expense account and decreases a liability, equity, or revenue account. Conversely, a credit decreases an asset or expense account and increases a liability, equity, or revenue account.

Question 3: How are long-term investments accounted for in a balance sheet?

Answer: Long-term investments are typically classified as held-for-sale, held-to-maturity, or trading investments. Held-for-sale investments are reported at fair value with unrealized gains and losses recognized in the income statement. Held-to-maturity investments are reported at cost with unrealized gains and losses recognized in other comprehensive income. Trading investments are reported at fair value with unrealized gains and losses recognized in the income statement.

Question 4: What is the importance of the statement of cash flows?

Answer: The statement of cash flows provides information about a company's cash inflows and outflows over a period of time. It is used to assess a company's liquidity and financial stability, and to make decisions about future investments and financing.

Question 5: How are inventory costs determined under the last-in, first-out (LIFO) method?

Answer: Under LIFO, the assumption is that the most recent purchases are the first to be sold. This means that the cost of goods sold is based on the most recent prices, which can lead to higher inventory values and lower cost of goods sold in periods of rising prices.
