GERMAN TANK MAINTENANCE IN

WORLD WAR 2

[Download Complete File](#)

How were tanks repaired in ww2? The repair crews were transported on the prime movers. The detachment was responsible for on-the-spot repairs of disabled tanks, including soldering and welding. It was highly mobile and capable of operating in any terrain.

What is the solution to the German tank problem? The MVUE equation solves the German Tank Problem by operating on the assumption that the population maximum is likely to be just a little higher than the sample maximum. That difference between sample maximum and population maximum is approximately equal to the mean gap between each number in the sample.

What was the German tank strategy in ww2? Heinz Guderian, the famed German tank commander, carefully crafted a military strategy where tanks were at the center of battle. Guderian envisioned armored columns leading spearheads of an army, backed with air power, and followed by infantry units left to clean up any remaining resistance.

Why were German tanks so effective in ww2? The short 75 mm (2.95 in) L/24 gun was the main advantage of the Panzer IV; the weight and armor of early models were close to that of the Panzer III. With an upgrade of the Panzer IV's 75 mm L/24 short gun to a longer high-velocity 75 mm gun, suitable for anti-tank use, the tank proved to be highly effective.

Were German tanks better than American tanks in WWII? American main battle tanks in the European Theater of World War II were technologically inferior to their German counterparts. Crews in the M4 Sherman tank thus suffered extreme casualties in the fight to liberate mainland Europe from Nazi Germany.

What happened to all the destroyed tanks in WW2? More than 75 years after the war's conclusion, tanks, watchtowers, ships, and aircraft can still be spotted rusting on Normandy beaches, slowly getting buried under Sahara sands, becoming mossy planters in Belorussian forests, and acquiring gilled tenants under Pacific waters.

What was the weakness of the Panzer tank? Machine guns were known to be largely useless against even the lightest tank armor of the time, restricting the Panzer I to a training and anti-infantry role by design.

Why were German tanks unreliable? Why were German tanks unreliable and prone to breaking down during World War II? According to Field Marshal Rommel, the German tanks were not properly tested before being issued, and to make things far far worse, they had to be driven everywhere and did not have trucks to carry them long distances.

Why was the Panzer tank so effective? Its long-barreled, high-velocity 88-mm gun, adapted from the Germans' formidable anti-aircraft (Flak) and anti-tank (Pak) guns, could penetrate even the most heavily armoured Soviet tanks at extremely long range.

What tank did the Germans fear? This is just an example, but during Operation Barbarossa, German forces were often terrified, at least in the early days, of the T-34 and KV tanks.

What was the most feared German tank in ww2? The infamous Tiger I was probably the most feared tank of World War II. It didn't have the thickest armor or the most powerful gun used by German tanks, but upon its introduction in 1942, no tank fielded by any nation could compare to it.

What was the most reliable German tank in ww2? The Panther is often believed to be the best German tank of the Second World War. When the Germans invaded Russia in June 1941, they were surprised by the quantity and quality of Soviet

armour. Hitler ordered that the T-34 be copied and the result was the Panther, which saw action for the first time at Kursk in 1943.

Did France have better tanks than Germany WW2? French tanks generally outclassed German tanks in firepower and armor in the 1940 campaign, but their poor command and control doctrine negated these advantages. By 1943, two-way radio was nearly universal in all armies. A trend towards heavier tanks was unmistakable as the war proceeded.

Which country had the best tanks in WWII? The Soviet Union showed it could be done. The T-34, produced in 1940, was arguably the best tank of the war. From the very start, the T-34 achieved that crucial balance between armour, firepower and mobility that eluded British tank designers for so long.

What did German soldiers think of tanks in ww1? The first tank attacks had caused fear amongst German soldiers. Some had fled rather than face them. Even at Flers, though, the Germans had been able to destroy tanks with artillery, and they found that machine gun fire and grenades could damage them.

Why was the Sherman tank so bad? The M4 Sherman Tanks Had Shortcomings in Design... Although it mounted 75mm cannon, it was of a low-velocity type. The Sherman's designers felt that a low-velocity gun would last longer than a high-velocity one. They failed to realize that few Shermans would ever last long enough in combat to wear out their barrels.

Could a Sherman beat a Panzer 4? At least one Panzer IV was documented to have been knocked out by a Sherman on the last day of the war. And thus, the last fight ever between a Sherman and a Panzer IV took place 22 years after the end of World War II.

Did Americans ever use captured German tanks? While the Allies were usually blessed with a marked numerical superiority over the Axis forces, Allied troops did not hesitate to use captured AFVs to supplement their numbers still further. The belief that German armored vehicles were qualitatively superior to Allied models only reinforced the desire to use them.

What happened to all the German guns after WWII? Because the Bundeswehr—the West German armed forces which absorbed the East German military—had no use for most of the equipment, it sold or donated much of it to other countries. (The Bundeswehr put other weaponry in storage, used it for parts, or discarded it.

What tank has never been destroyed? The Challenger 2 has in the past been billed as the tank that's never suffered a loss at the hands of the enemy.

Who killed the most tanks in ww2? In January 1944, Wittmann was awarded the Knight's Cross for his record of more than 90 enemy tanks destroyed. By March he was in command of his company.

How did WW2 self sealing tanks work? These tanks were flexible containers, made of a laminated self-sealing material like vulcanized rubber and with as few seams as possible to minimize leak paths. As early tests showed that impact could over-pressurize a fuel tank, the self-sealing fuel cell is suspended, allowing it to absorb shocks without rupture.

Did WWII tanks have air conditioning? Was it physically comfortable to be inside these tanks during battles? The real short answer is “no”; and “no” Slightly longer answer is simply “no” to the AC. Air conditioning was not common in anything in that time period. WW2 tanks were simply not air conditioned.

Which country had the best tanks in WWII? The Soviet Union showed it could be done. The T-34, produced in 1940, was arguably the best tank of the war. From the very start, the T-34 achieved that crucial balance between armour, firepower and mobility that eluded British tank designers for so long.

What happened to captured tanks in WW2? After testing by the German Army Weapons Office, some captured tanks were put on display while others were put into service against their original owners. While one can certainly find numerous examples of just such actions, this was not always the case.

What are self-sealing fuel tanks made of?

How did tanks become more sophisticated in ww2? Between World Wars I and II, improvements were made to the tank engine to give it greater speed and power; track and suspension systems and weaponry upgrades came as well. Soldiers of the 77th Division infantrymen trudge toward the front lines past mud-clogged tanks during the battle for Okinawa, Japan, in 1945.

How did they paint tanks in ww2? German tanks post Feb 1943 left the factory in a Dark yellow base, the other colours were then applied by the crew in the field. The method of application would vary depending on what was to hand. they certainly could be airbrush, there are some well known pics of a Tiger II being painted this way.

Did German WW2 tanks have heaters? edit: I started flipping thru my copy of Panzer Gunner and in the chapter titled "The Jagdpanzer IV in Winter Warfare in West Prussia" I found: "like the Panzer IV the Jagdpanzer had absolutely no heating in them." He goes on to discuss the new reversible winter uniform and how it no longer required them to stuff ...

What fuel did WWII tanks use? Except for a few World War II model Sherman tanks, even the main battle tank used gasoline.

Do tanks have toilets? A typical answer runs like "Tanks do not have any bathroom facilities.

Are there still abandoned tanks from WWII? Yes abandoned tank wrecks are still visible on the pacific islands. Some can still be found in the North African desert.

Which country had the best fighter planes in WWII? With its excellent maneuverability and considerably long range, the Japanese Zero was considered the best carrier-based fighter aircraft of the entire war. For the first few years after the US entry into the war, the Zero outperformed all American counterparts.

What was the deadliest tank of WWII? The Sturmgeschütz III, or Stug III, was the German Army's ace mobile tank killer, with an astonishing 40,000 tank and armored vehicle kills to its credit. Although Germany eventually lost the war, the Stug III undoubtedly helped delay Allied victory, especially on the Eastern Front.

Did Americans ever use captured German tanks? While the Allies were usually blessed with a marked numerical superiority over the Axis forces, Allied troops did not hesitate to use captured AFVs to supplement their numbers still further. The belief that German armored vehicles were qualitatively superior to Allied models only reinforced the desire to use them.

What was the feared tank in WW2? Germany's Tiger tank, whether in the form of the Tiger I or later Tiger II (King Tiger), was the most feared tank of WWII.

Did a tank ever shoot down a plane in WW2? Although it is very hard to aim at a target moving that fast, the 88mm that the Tigers used was originally meant for anti aircraft, so one lucky shot was enough to destroy a plane. This was, as Otto would later describe, one of the single most impressive things he'd ever seen.

Text Appeal: The Ultimate Texting Guide

Question 1: What is the optimal length for a text message?

Answer: Keep texts concise and to the point, ideally between 50-160 characters. Longer messages can be overwhelming and make it difficult to engage the recipient.

Question 2: How should I use emojis and abbreviations?

Answer: Use emojis sparingly to convey emotions or clarify meaning. Avoid excessive use of abbreviations, as they can be confusing and unprofessional. Stick to commonly understood abbreviations, such as "BRB" (be right back).

Question 3: What is the best time to send a text message?

Answer: Consider the recipient's time zone and availability. Weekdays between 9 am and 5 pm are generally appropriate, while weekends and late evenings may be less appropriate unless it's an emergency.

Question 4: How should I handle sensitive topics via text?

Answer: Avoid discussing highly sensitive or controversial topics over text. Instead, suggest a phone call or in-person meeting to ensure clarity and minimize misunderstandings.

Question 5: What is the etiquette for group text messages?

Answer: When sending group texts, keep the topic focused and avoid sending excessive messages. Respect the privacy of individuals who may not want to participate in the conversation. Use a polite tone and avoid spamming or sending unsolicited messages.
