**What is the political globalization of the world?** Political globalization can be seen in changes such as democratization of the world, creation of the global civil society, and moving beyond the centrality of the nation-state, particularly as the sole actor in the field of politics.

**How does Globalisation affect the world politics?** The role of political globalization on this point is forcing governments to adopt global institutions. It increases the number of international organizations in which a country is a member. This makes governments more accountable in the global area and forcing them to pay attention to protect human rights.

**Who wrote the globalization of world politics?** About the Author John Baylis is emeritus professor of politics and international relations and a former pro vice chancellor at Swansea University.

**What is globalization theory in international relations?** Globalization in its literal sense is the process of globalizing, transformation of some things or phenomena into global ones. It can be described as a process by which the people of the world are unified into a single society and function together.

**What are the negative effects of globalization in politics?** The negative effects of globalisation include, greater inequality, increased corruption, reduction in sovereignty erosion of cultural identity and degradation of the environment.

**What is globalization in the world today?** Globalization describes the growing interdependence of the world's economies, cultures, and populations, brought about by cross-border trade in goods and services, technology, and flows of investment, people, and information. Countries have built economic partnerships to facilitate these movements over many centuries.

**Is globalization good or bad?** Globalization is facilitated economically by free trade agreements, which permit barrier-free imports and exports across borders. While globalization brings many advantages—including lower prices and higher standards of living to some—it also has drawbacks, including wealth concentration and cultural homogeneity.

**What are the positive and negative effects of globalization?** Positive effects of globalization include increased international trade and investment flow. Negative effects include economic inequality and loss of local cultural identity.

**What are the 3 types of globalization?** Academic literature commonly divides globalization into three major areas: economic globalization, cultural globalization, and political globalization.

**What is the world polity theory of globalization?** World polity theory was developed as an analytical frame for interpreting global relations, structures, and practices. Invoking an image of the world as a system of interrelated interdependent

units, it is a theory of transnational interaction and global social change.

**Who is the father of global politics?** Hans Joachim Morgenthau (February 17, 1904 – July 19, 1980) was a German-American jurist and political scientist who was one of the major 20th-century figures in the study of international relations.

**Is globalization liberal?** Since the Second World War, globalization has been underpinned by a liberal international order, a rules-based system structured around the principles of economic interdependence, democracy, human rights and multilateralism.

**What are the 3 main theories of globalization?** The three theories of globalization are the world system theory, the world polity theory and the world culture theory. Each of these theories have pros and cons, but I tend to lean more towards the world polity theory.

**What is globalization in global politics?** Globalization – the process of continuing integration of the countries in the world – is strongly underway in all parts of the globe. It is a complex interconnection between capitalism and democracy, which involves positive and negative features, that both empowers and disempowers individuals and groups.

**What are the pros and cons of globalization?**

**What is the political economy in a Globalised world?** The recent global financial crisis illustrates how fragile economic globalization is and how vulnerable all global citizens are to economic events outside their own country. Indeed, global economics is more important for national economic growth than domestic policies.

**How does globalization change the world?** Globalization expands business operations worldwide and is facilitated by communications, technological advancements, and socioeconomic, political, and environmental developments. It gives organizations a superior competitive position and lower operating costs to increase products, services, and consumers.

**What is the global political system?** Global politics, also known as world politics, names both the discipline that studies the political and economic patterns of the

DROPSHIPPING BLUEPRINT START DROPSHIPPING AND START MAKING MONEY ONLINE IN

world and the field that is being studied. At the centre of that field are the different processes of political globalization in relation to questions of social power.

**What is an example of a globalization?** Thus, globalization can be defined as the stretching of economic, political, and social relationships in space and time. A manufacturer assembling a product for a distant market, a country submitting to international law, and a language adopting a foreign loanword are all examples of globalization.

### **Chapter 7 Practice Questions and Solutions for "Statistics, Data Analysis, and Decision Modeling, 5th Edition"**

**Question 1:** A survey of 200 students found that the average grade on a midterm exam was 75 with a standard deviation of 10. What is the probability that a randomly selected student scored between 65 and 85?

**Solution:** Using the normal distribution with mean 75 and standard deviation 10, we can calculate the z-scores for 65 and 85:  $z = (65 - 75) / 10 = -1$  and  $z = (85 - 75) / 10 = 1$ . Then, using a standard normal distribution table, we find that the area between  $z = -1$  and  $z = 1$  is approximately 0.68. Therefore, the probability that a randomly selected student scored between 65 and 85 is 0.68.

**Question 2:** A company wants to test a new marketing campaign. They randomly assign 100 customers to the new campaign and 100 customers to a control group. After the campaign, they find that the average sales for the new campaign group is \$150 with a standard deviation of \$25, while the average sales for the control group is \$120 with a standard deviation of \$30. Is there a significant difference in sales between the two groups?

**Solution:** To test this, we can use a two-sample t-test. The test statistic is calculated as:  $t = (150 - 120) / \sqrt{(25^2 / 100) + (30^2 / 100)} = 3.16$ . Using a t-table with 198 degrees of freedom ( $100 + 100 - 2$ ), we find that the p-value is less than 0.01. Therefore, we can conclude that there is a statistically significant difference in sales between the two groups.

**Question 3:** A study investigates the relationship between age and income. The following data is collected:

DROPSHIPPING BLUEPRINT START DROPSHIPPING AND START MAKING MONEY ONLINE IN

**Age Income**

25	40,000
30	50,000
35	60,000
40	70,000
45	80,000

What is the correlation coefficient between age and income?

**Solution:** To calculate the correlation coefficient, we can use the formula:  $r = (n\sum xy - \sum x \sum y) / \sqrt{(n\sum x^2 - (\sum x)^2)(n\sum y^2 - (\sum y)^2)}$ , where  $n$  is the number of data points. Plugging in the values, we get  $r = 0.986$ , indicating a strong positive correlation between age and income.

**Question 4:** A pharmaceutical company is developing a new drug. They conduct a clinical trial with 200 patients, of whom 120 experience a positive outcome. What is the 95% confidence interval for the proportion of patients who will experience a positive outcome?

**Solution:** The sample proportion is 0.6. Using the formula for the confidence interval for a proportion:  $CI = p \pm z\sqrt{p(1-p)/n}$ , where  $z$  is the z-score for the desired confidence level (95% corresponds to  $z = 1.96$ ), we get  $CI = 0.6 \pm 1.96\sqrt{0.6*0.4/200} = (0.52, 0.68)$ .

**Question 5:** A store manager wants to forecast the daily sales for the next week. They have the following historical data:

Day	Sales
Monday	100
Tuesday	120
Wednesday	110
Thursday	130
Friday	140

Using exponential smoothing with a smoothing constant of 0.3, what is the forecast for Saturday's sales?

**Solution:** The forecast for Saturday's sales is calculated as:  $F_{t+1} = \alpha Y_t + (1-\alpha)F_t$ , where  $F_{t+1}$  is the forecast,  $\alpha$  is the smoothing constant, and  $Y_t$  and  $F_t$  are the actual sales and the previous forecast. Using the given data and  $\alpha = 0.3$ , we get  $F_{t+1} = 0.3 \cdot 140 + (1-0.3)F_t = 0.3 \cdot 140 + (1-0.3)130 = 132$ . Therefore, the forecast for Saturday's sales is \$132.
