What is the CDC definition of case surveillance? Case surveillance occurs each time public health agencies at the local, state, or national levels collect information about a case or person diagnosed with a disease or condition that poses a serious health threat to Americans.

What is case definition in disease surveillance? The use of case definitions is very important in epidemiology in order to standardize criteria for identification of cases. All case definition must include the three classical dimensions of epidemiological variables: time, place and person.

What is disease surveillance definitions? Disease surveillance is an information-based activity involving the collection, analysis and interpretation of large volumes of data originating from a variety of sources. The information collated is then used in a number of ways to. Evaluate the effectiveness of control and preventative health measures.

What is communicable disease surveillance? Surveillance for communicable diseases is a part of public health surveillance, which in turn is part of the wider health information system. The objective of the surveillance system and use of the information determines the data collected and the speed of information flow within the system.

What are the three types of case definitions? Case definition categories Confirmed, probable and suspect case categories are commonly used, although different terminology may be found (e.g., “persons under investigation”).

What are the four types of disease surveillance? Infectious disease surveillance concurrently involves the health care delivery system, the public health laboratory, and epidemiologists. Each of these sectors contributes to the four basic components of surveillance, which are (1) collection, (2) analysis, (3) dissemination, and (4) response.

What is case-based surveillance? Case-based surveillance refers to surveillance systems that collect information about each case at the individual level. This type of surveillance system has a case investigation form where information can be gathered from the patient or their family members, their medical records, and their laboratory records.

What is a case definition in a disease outbreak? A case definition includes criteria for person, place, time, and clinical features. These should be specific to the outbreak under investigation. "Person" describes key characteristics the patients share in common.

What is the meaning of case definition? (ke?s) Word forms: plural cases. 1. countable noun [oft in NOUN] A2. A particular case is a particular situation or incident, especially one that you are using as an individual example or instance of something.

What is active surveillance CDC? Active surveillance, in which the health department initiates contact with the healthcare provider to identify cases, involves regular (e.g., weekly) contact with healthcare providers.

What is case control surveillance? Case-control studies aim to determine if an exposure is associated with a specific disease by comparing the proportion of exposed and unexposed individuals among cases and controls. Cases are individuals who have the disease of interest, while controls are randomly selected individuals without the disease.
