imprecise and uncertain data.

What is fuzzy portfolio selection? This paper presents an approach to portfolio selection using fuzzy decision theory. The approach is such that a given target rate of return is achieved for an assumed market scenario. If the assumed market scenario turns out to be incorrect, the portfolio is guaranteed to secure a given minimum rate of return.

What is fuzzy algorithm used for? Today, fuzzy logic is used in a broad range of applications including: aerospace engineering, automotive traffic control, business decision-making, industrial processes, artificial intelligence, and machine learning. In standard logic, every statement must have an absolute value: true or false.

What is a fuzzy methodology? Fuzzy analysis represents a method for solving problems which are related to uncertainty and vagueness; it is used in multiple areas, such as engineering and has applications in decision making problems, planning and production.

What is fuzzy selection tool? The Fuzzy Select (Magic Wand) tool is designed to select areas of the current layer or image based on color similarity. When using this tool, it is very important to pick the right starting point. If you select the wrong spot, you might get something very different from what you want, or even the opposite.

What is fuzzy multi criteria decision making method? Fuzzy MCDM methods enable to get more realistic results in decision making problems. In general, Analytic Hierarchy Process (AHP), Analytic Network Process (ANP) and Technique for Order Preference by Similarity to Ideal Solution (TOPSIS) methods are used with fuzzy sets.

What is a fuzzy approach? Fuzzy logic is based on the observation that people make decisions based on imprecise and non-numerical information. Fuzzy models or fuzzy sets are mathematical means of representing vagueness and imprecise information (hence the term fuzzy).

What is a real life example of fuzzy logic? Real-Life Applications of Fuzzy Logic It is used in automotive systems to monitor and control the traffic and speed. Large companies used it for personal evaluation and decision making support systems.

The chemical industry uses Fuzzy Logic for processes like controlling the pH.
